INTRODUCTIONS

AMS Consulting (AMS) is a qualified consultant for the Metropolitan Transportation Commission (MTC) Pavement Management Technical Assistance Program (P-TAP). AMS was assigned the City of Morgan Hill to perform a City-wide pavement management update. This update consisted of:

1. Inventory and inspection of all paved roads within City limits. These roads were inspected to standard using modified ASTM 6433-11;
2. Updating of the City's pavement management database with current maintenance and rehabilitation strategies; and
3. Providing the City with an updated report that helps the City prioritize roads for treatment using various budget constraints.

The purpose of this report is to assist City staff in fully utilizing the MTC Pavement Management Software (StreetSaver) on a network level. This report will help City staff assess the revenues needed to meet the needs recommended by StreetSaver. In addition, it will help:

- Maximize the City's return on investment from available maintenance and rehabilitation funds;
- Generate a prioritized five-year plan; and
- Identify specific areas in need of maintenance and rehabilitation.

PAVEMENT INSPECTIONS

As part of this update, AMS certified raters assessed the City's pavement surface using the modified ASTM 6433 standard. These inspections entailed the identification of eight surface distress types, severity levels and quantifying them. These inspections were performed using handheld mobile rater technology developed by MTC StreetSaver and digital measuring wheels. These devices allow for real-time pavement condition calculations. The following 8 distress types identified were:

1. Alligator Cracking
2. Block Cracking
3. Distortion
4. Longitudinal and Transverse Cracking
5. Patch and Utility Cuts
6. Rutting and Depressions
7. Raveling
8. Weathering

These distresses are rated using representative sampling which is considered 10% of each road segment. Following each day of field work, inspectors upload the distress types, severity levels and quantity information into StreetSaver.

StreetSaver is then able to calculate a Pavement Condition Index (PCI) for each road segment. A PCI rating index is a numerical value between 0 to 100; with 0 being a failed road and 100 being a brand new street. The PCI is calculated using StreetSaver system algorithms that were developed by MTC.

The road network is broken down into three functional classifications:

Arterial

High capacity roads that connect collector roads to freeways. These roads are typically wider and heavily traveled (i.e. East Dunne Ave., etc.). Most often these roads can be paid for by using state and federal grants with the City paying a portion of the costs. The average daily traffic for an arterial street is 15,000 (low volume) to 50,000 (high volume) vehicles.

Collector

Roads that are less traveled than arterials; considered low to moderate capacity roads. These roads serve to deliver traffic from residential streets to arterial roads. These roads are typically narrower in width than arterial roads but can carry a significant amount of traffic (i.e. Wright Ave., etc.). These roads are also eligible for state grants with the City paying a portion. Daily traffic for collector streets average 5,000 (low volume) to 15,000 (high volume) vehicles.

Residential/Local

Roads that serve a localized geographical area within a city. These roads are narrower in width than collectors and deliver low traffic volumes. These streets are typically not eligible for federal or state funding. Residential streets are less traveled than collector roads; daily traffic averages 1,000 (low volume) to 5,000 (high volume) vehicles.

Each street is not built the same and therefore does not share the same deterioration curves or have the same life expectancy. Figure 1 is an example of the City's current life expectancy for pavementⁱ. The useful life for an arterial is much shorter than a residential street and this is due to the amount of traffic.

FIGURE 1. PAVEMENT LIFE EXPECTANCY

CURRENT STATE

The City of Morgan Hill owns and manages approximately 128.33 centerline miles (Table 1) or 278.99 lane milesⁱⁱ. The overall network pavement condition index (PCI) for the City is **72**. The City's current backlogⁱⁱⁱ is approximately **\$23.2 million** (Table 2). Backlog is derived from the work scheduled in prior years but deferred due to insufficient funding resources. To maintain the PCI at optimal levels^{iv} the City would need to spend approximately \$45.2 million (Table 2) by the end of 2021.

TABLE 2. CITY NEEDS COST SUMMARY

	Preventative Maintenance	Rehabilitation	Total	PCI
2017	\$3,929,820	\$19,248,027	\$23,177,847	83
2018	\$344,901	\$3,577,456	\$3,922,357	82
2019	\$656,986	\$6,762,343	\$7,419,329	83
2020	\$453,123	\$5,324,824	\$5,777,947	84
2021	\$917,127	\$3,974,744	\$4,891,871	84
Total	\$6,301,957	\$38,887,394	\$45,189,351	

TABLE 1. CITY NETWORK SUMMARY STATISTICS

	Total Sections	Total Center Miles	Total Lane Miles	PCI
Arterial	69	20.39	60.63	72
Collector	124	23.66	48.92	71
Residential/Local	711	84.28	169.44	72
Total	904	128.33	278.99	72

Figure 2 show that approximately 62.9% of City roads have a PCI of 70 or better and approximately 37.1% of City roads have a PCI of 70 and Below.

FIGURE 2. PERCENT OF CITY CONDITION CATEGORIES

Figure 3 is a local jurisdiction PCI comparison of all the local agencies in Santa Clara County. The network PCI information was obtained from the Metropolitan Transportation Commission (MTC).

FIGURE 3. LOCAL JURISDICTION PCI COMPARISON

The pavement management system categorizes each street segment into a PCI category. Figure 4 show the condition categories with the type of maintenance strategy for each street.

FIGURE 4. CITY'S CURRENT MAINTENANCE STRATEGY

Condition Category	Distress Description	Type of Treatment
Condition Cat I (Good - Excellent) 70 - 100 PCI	Pavements require mostly preventive maintenance and have only low levels of distress, such as minor cracks or spalling, which occur when the top layer of asphalt begins to peel or flake off because of water permeation.	Crack Seal, Slurry Seal, and Base Failure
Condition Cat II/III (At-Risk - Fair) 50-70 PCI	Pavements may require a combination of rehabilitation and preventative maintenance to keep them from deteriorating rapidly.	Thin AC Overlay (mill and overlay with 1.5" of asphalt). This treatment includes base failure treatments.
Condition Cat IV (Poor) 25-50 PCI	Pavements have extensive amounts of distress and require major rehabilitation or reconstruction. Pavements in this category affect the speed and flow of traffic significantly.	Thick AC Overlay (mill and overlay with 2" or more of asphalt). This treatment includes base failure treatments.
Condition Cat V (Very Poor) 0-25 PCI	Pavements need reconstruction and are extremely rough and difficult to drive.	Reconstruct Structure (remove and replace of pavement and base layer).

BUDGET SCENARIOS

In order to determine the most cost-effective plan to meet the City's needs, a five-year calculation must be generated using the City's up to date maintenance strategies and unit costs. Unit costs are "Total Project Costs" that include but not limited to administrations, design and construction costs. A 3% interest and inflation values have also been incorporated into this calculation.

SCENARIOS

The following four scenarios tested:

1. Current Funding
2. Maintain PCI at 72
3. Increase PCI to 77
4. Optimal PCI

CURRENT FUNDING

The City's current budget for the next five years is \$8.5M in However, the City has secured OBAG 2^v funding for 2017 bringing the 2017 budget to \$2.8 million. Figure 5 results show that the overall network PCI decreases to 67 by the end of 2021, while the backlog increases to \$31.5 million. .

FIGURE 5. CURRENT FUNDING ON PCI AND BACKLOG

Table 3 shows a snapshot of what the overall network would look like at the end of year 2021. Results show that 58.8% of the road network will have a PCI between 70 and 100 (the good to very good condition category).

TABLE 3. CURRENT FUNDING - CONDITION CATEGORY SUMMARY

Current Funding	
Condition Categories	Percent of Network
Condition Category I - Good to Very Good/Excellent (PCI 70 - 100)	58.8%
Condition Category II/III - At-Risk to Fair (PCI 50 - 70)	19.6%
Condition Category IV - Poor (PCI 25 - 50)	16.2%
Condition Category V - Failed - Poor (PCI 0 - 25)	5.4%

MAINTAIN PCI AT 72

Figure 6 represents the costs and impacts by maintaining the overall network PCI at 72. With the OBAG 2 funding in year 1, system results show that the PCI would increase to 73, while the backlog would decrease to \$20.6 million. By year end of 2021, the PCI would be maintained at 72 and the backlog would increase to \$24.1 million.

FIGURE 6. MAINTAIN PCI AT 72

Table 4 shows the results of what the network will look like at the end of 2021. Results show that 70.1% of the road network will be in Good to Very Good Condition.

TABLE 4. MAINTAIN PCI AT 72

MAINTAIN PCI AT 72	
Condition Categories	Percent of Network
Condition Category I - Good to Very Good/Excellent (PCI 70 - 100)	70.1%
Condition Category II/III - At-Risk to Fair (PCI 50 - 70)	14.1%
Condition Category IV - Poor (PCI 25 - 50)	10.4%
Condition Category V - Failed - Poor (PCI 0 - 25)	5.4%

INCREASE PCI TO 77

Figure 7 represents the costs and impacts by increasing the overall network PCI by 5 points. Implementing this scenario would cost approximately \$30.5 million over the next 5 years. Results show that the backlog would decrease to \$14 million by the end of year 2021.

FIGURE 7. INCREASE PCI TO 77

Table 5 shows the results of what the network will look like at the end of 2021. Results show that 82.9% of the road network will be in Good to Very Good Condition.

TABLE 5. INCREASE PCI TO 77

INCREASE PCI TO 77	
Condition Categories	Percent of Network
Condition Category I - Good to Very Good/Excellent (PCI 70 - 100)	82.9%
Condition Category II/III - At-Risk to Fair (PCI 50 - 70)	7.4%
Condition Category IV - Poor (PCI 25 - 50)	4.3%
Condition Category V - Failed - Poor (PCI 0 - 25)	5.4%

OPTIMAL PCI (MODIFIED NEEDS)

Figure 8 is an Optimal PCI Scenario. This scenario uses the cost of needs and distributes evenly over the next 5 years. Results show that it would cost \$9 million per year. By the end of year 2021 the City would have reached 83 PCI, while the backlog decreases to \$1 million.

FIGURE 8. OPTIMAL PCI (MODIFIED) PCI AND BACKLOG

Table 6 shows that approximately 94% of the City's road network will have a PCI better than 70.

TABLE 6. OPTIMAL PCI (MODIFIED NEEDS) – CONDITION CATEGORY SUMMARY

Optimal PCI	
Condition Categories	Percent of Network
Condition Category I - Good to Very Good/Excellent (PCI 70 - 100)	93.6%
Condition Category II/III - At-Risk to Fair (PCI 50 - 70)	0.4%
Condition Category IV - Poor (PCI 25 - 50)	1.9%
Condition Category V - Failed - Poor (PCI 0 - 25)	0.4%

CONCLUSION AND NEXT STEPS

City streets are one of the many assets that are utilized by every resident, visitor and business. They impact public safety, promote mobility and enable economic activity. Our streets in California are deteriorating. According to the California Department of Transportation, annual investments in roadway maintenance and preservation has not kept pace with needs. Road repair and maintenance has declined each year since 2007. The base excise tax (currently fixed at 18 cents per gallon of gas sold) is the primary source of funding used to pay for road repairs. This base excise gas tax has not been raised in more than 20 years. Due to inflation, the increase to 18 cents in 1994 is only worth about 9 cents today. In addition, less gas tax is being collected due to an increase of hybrid and electric vehicles on the road. The Department of Justice (DOJ) and the Department of Transportation (DOT) have required local governments to update their curb ramps if roads are altered^{vi}. This mandate has added additional costs to local governments and thus reduced the number of streets earmarked for repair.

The City's network comprises of 128.33 centerline miles of roads and is one of the most valuable asset to the City.

The following scenarios rank the budget scenarios based on the City's pavement management system recommendations:

1. The first recommended budget scenario the City should consider is to implement the modified or optimal PCI scenario. This scenario brings the overall network PCI to 83 by the end of 2021 (Figure 9), while the backlog

decreases to \$1.1 million (Figure 10). Approximately 94% of all roads will have a PCI of 70 or better.

2. The second recommended budget scenario the City should consider is increasing the overall network PCI to 77. Results show that the backlog would decrease to \$14 million by end of 2021 (Figure 10). In addition, 83% of the road network will have a PCI of 70 or better.
3. The third scenario is maintaining the overall network PCI at 72 (Figure 9). This scenario would cost approximately \$19.5 million over the next 5 years. This investment decreases the backlog in the first 4 years and increases at the end of year 2021 to \$24.1 million (Figure 10). Approximately 70.1% of City roads will have a PCI greater than 70.
4. In comparison to the other scenarios tested, the current funding scenario is least recommended. This scenario expends approximately \$8.5 million over the next 5 years. System results show that the PCI increase in year 1 with OBAG funding but in the subsequent years the PCI drops down to 67 (Figure 9) and the backlog increases to \$31.5 million (Figure 10). Approximately 59% of City roads will have a PCI greater than 70.

FIGURE 9. SCENARIOS – PCI SUMMARY

FIGURE 10. SCENARIOS – BACKLOG/DEFERRED SUMMARY

With insufficient funding resources to meet all maintenance and rehabilitation work recommended by the pavement management system (optimal PCI), prioritization of the maintenance needs will be required given the budget constraints. See Appendix IV – Sections selected for treatments for a prioritized maintenance list.

NEXT STEPS

Based on the pavement management update, it is recommended that the City take the following actions:

1. Ensure that all maintenance, rehabilitation and replacement treatments are updated in the pavement management system.
2. Explore the use of emerging pavement technologies.
3. Continue to explore new revenue streams for pavement projects.

APPENDIX

SECTION PCI LISTING.....	SECTION I
NEEDS AND NETWORK SUMMARY STATISTICS.....	SECTION II
NETWORK CONDITION AND COST SUMMARY.....	SECTION III
SECTIONS SELECTED FOR TREATMENT.....	SECTION IV
OTHER BACKUP DOCUMENTS.....	SECTION V

ⁱ Life expectancy values were obtained from the StreetSaver Pavement Management System.

ⁱⁱ Lane Mile is the length (lineal feet) of the street segment divided by 5,280' multiplied by the number of lanes in that segment.

ⁱⁱⁱ The backlog is the accumulated maintenance and rehabilitation treatment costs over the years that were recommended by the pavement management system but deferred due to insufficient funding.

^{iv} Optimal PCI is the recommended PCI conditions derived by the StreetSaver System. Associated costs and recommend treatments are also included to support the overall network PCI.

^v OBAG 2 is the second round of funding for 2017-18 through 2021-22 projects. This funding is eligible for local streets and roads preservation, bicycle and pedestrian improvements, livable communities, safe routes to school, priority conservation areas, and CMA planning activities.

SECTION PCI

The Section PCI report is derived from the systems customized report wizard and exported into Microsoft Excel. The Section PCI contains a PCI reported sorted by Street Name (ascending) and a PCI Report sorted by PCI (descending).

ST ID – Street Identification

SEC ID – Street Section Identification

STREET NAME – Street Name

BEGIN LOCATION – Start of the management section

END LOCATION – End of the management section

LANES – # of lanes in the management section

FC – This is a group of streets or roadway subsystems that are classified pending on the level of service and traffic.

A – Arterial

C – Collector

R – Residential/Local

O – Other (user defined)

LENGTH – Length of management section

WIDTH – Width of management section

AREA – Area of management section

CONSTRUCTION YEAR – Year management section was constructed - original

PCI DATE – Date of which the management section was inspected, inspection entry or M&R entry calculation

PCI – Pavement Condition Index of the management section – Last Calculated PCI

The Pavement Condition Index is a rating derived from the Pavement Management System (PMS). The rating is based from the visual distress inspection information that consists of the MTC inspection guidelines (Alligator Cracking, Block Cracking, Distortion, Longitudinal and Transverse Cracking, Rutting, and Weathering and Raveling) or any maintenance and rehabilitation information that was entered into the PMS.

Below are images of what streets look like in the condition category:

CONDITION CATEGORY RATING

Condition Category I (PCI 90 – 100, Pavement is classified in excellent condition).

Condition Category I (PCI 70 – 89, Pavement is in very good condition, pavement has little distress).

Condition Category II/III (PCI 51-69, Pavements are classified in the Good Category and have significant non-load and load related distresses).

Condition Category Good IV (PCI 26-50, Pavement are classified in the Poor Category and have major distress).

Condition Category V (PCI 0 – 25, Pavement is classified in the very poor to failed category and has extensive amounts of major distress)
