

CITY OF MORGAN HILL

## FIRE FLOW GUIDELINES

This service is for obtaining fire flow information required for permitting purposes. Contractors often use this information when designing fire sprinkler systems. Building projects might also need a fire flow report to submit with a permit application.

**If you are working on a project served by City of Morgan Hill Utilities and would like to request fire flow information, please fill out the Fire Flow Test Application.** The application form may be subject to change.

Pressure and flow data provided may be based on a hydraulic modeling analysis and/or a physical test. Please allow approximately 5 business days for a request to be processed and information sent back to the email address included on the form. Response times may vary depending on staffing and operational conditions.

A fee will be charged for new fire flow requests to cover the cost of providing this service.
