EXECUTIVE SUMMARY

The City of Morgan Hill's street network is 141.07 centerline miles in length and covers approximately 29.4 million square feet of pavement. This network is an essential asset and is among the most valuable assets maintained by the City. This asset is worth $417 million to replace[1]. Through the Metropolitan Transportation Commission (MTC) Pavement Management Technical Assistance Program (P-TAP), the City completed a comprehensive pavement management update that included field inspections and an update of the City's pavement management software. With the most recent inspection information and treatments, the City's overall Pavement Condition Index (PCI) is 74, classified as "*Good to Excellent"* for MTC standards. The PCI is a numerical rating from 0 – 100, with 0 being a failed street and 100 being a brand new pavement. 72.2% of the City's roads have a PCI of 70 and above and are classified in the "*Good to Excellent"* category (**Table ES 1**).

Table ES 1 – Overview of City's Current Pavement Condition

Current Condition Categories	Current
Condition I - Good to Excellent (PCI 70 - 100)	**72.2%**
Condition II/III - At Risk to Fair (PCI 50 - 69)	**16.9%**
Condition IV - Poor (PCI 25 - 49)	**8.5%**
Condition V - Failed to Very Poor (PCI 0 - 24)	**2.4%**

An adequately designed asphalt street typically lasts twenty years without the need for total reconstruction. However, if conditions change, such as higher daily traffic usage, then reconstruction of the pavement may be warranted sooner. Extending the life of the pavement with pavement preservation, as opposed to the replacement of pavement, is the goal of a pavement management program.

[1] The valuation is assessed by the assumption of replacing the entire street network with a new street valued in today's dollar.

Five budget scenarios were evaluated as part of the P-TAP update. AMS used the MTC StreetSaver pavement management software to run various budget scenarios. Based on a series of assumptions, StreetSaver allocates available funds across the street network, recommends improvements, and forecasts future PCI values if recommendations are implemented.

The five funding scenarios detailed (**Table ES 2**) below are five-year projections and provides useful "what-if" information on expected PCI and backlog values that may occur at different funding constraints. Backlog is the cost of a project recommended for treatment in the first year but deferred to the following years due to funding constraints. The following scenarios were analyzed and detailed below. The City's current Backlog is $32.4 million.

Scenario 1 – Current Budget

- Average funding of $3.5M per year for maintenance and rehabilitation.
- PCI decreases to 73 at the end of five years.
- Backlog increases from $32.4M to $44.9M at the end of five years.
- 66% of City streets will have a PCI equal to or greater than 70.

Scenario 2 – Constant PCI

- Average funding of $3.8M per year for maintenance and rehabilitation.
- PCI will remain constant at 74 at the end of five years.
- Backlog increases from $32.4M to $37.5M at the end of five years.
- 68.7% of City streets will have a PCI equal to or greater than 70.

Scenario 3 – Plus 5 PCI Increase

- Average funding of $7.9M per year for maintenance and rehabilitation.
- PCI increases to 79 PCI at the end of five years.
- Backlog decreases from $32.4 to $20.4M at the end of five years.
- 86.6% of City streets will have a PCI equal to or greater than 70.

Scenario 4 – Unconstrained Funding

- Average funding of $13.1M per year on maintenance and rehabilitation.
- PCI increases to 84 PCI at the end of five years.
- Backlog decreases from $32.4M to 0 at the end of five years.
- 95.3% of City streets will have a PCI equal to or greater than 70.

Scenario 5 – No Funding

- Average funding of $0 per year on maintenance and rehabilitation.
- PCI decreases to 67 at the end of five years.
- Backlog increases from $32.4M to $58.4M at the end of five years.
  55.2% of City streets will have a PCI equal to or greater than 70.

Table ES 2 – Summary of different funding levels (Scenarios)

	Scenario 1. Current Budget	Scenario 2. Constant PCI	Scenario 3. Plus 5 PCI Increase	Scenario 4. Unconstrained Funding	Scenario 5. No Funding
Average Yearly Budget	$3,500,000	$3,800,000	$7,870,060	$13,107,697	$0
Total Budget for 5 Years	$17,500,000	$19,000,000	$39,350,300	$65,538,485	$0
Current PCI	74	74	74	74	74
Current Backlog	$32,363,330	$32,363,330	$32,363,330	$32,363,330	$32,363,330
Current % in 'Good' condition	72.20%	72.20%	72.20%	72.20%	72.20%
PCI after 5 years (change)	73 (-1)	74 (0)	79 (+5)	84 (+10)	67 (-7)
Backlog after 5 years	$44,885,813	$37,543,969	$20,420,180	$0	$58,411,192
% 'Good' in 5 years	66.0	68.7	86.6	95.3	55.2
% 'Fair' in 5 years	21.6	18.3	7.5	3.0	28.6
% 'Poor' in 5 years	8.2	8.8	1.7	1.7	10.8
% 'Very Poor' in 5 years	4.2	4.2	4.2	0.0	5.4

INTRODUCTION

Paved streets in the City of Morgan Hill are among the many assets utilized by every resident, visitor, and business. A good street network enhances public safety, promotes mobility, and enables economic activity. The City is responsible for 141.07 centerline miles of roads or 309.08 lane miles[2].

This asset comprises 29.4 million square feet of asphalt concrete and is estimated at $417 million to replace.

AMS Consulting (AMS) was selected as the City's Pavement Management Consultant through the MTC P-TAP program. The program helps Local agencies in the San Francisco Bay Area update their pavement management program through inspection surveys and reporting. The program is designed to help agencies stretch their pavement expenditures by:

- Implementing, updating, and maintaining pavement management databases; and
- Providing updated pavement condition data of the network and each street segment.

What is a Pavement Management System (PMS)?

Pavement Management is the systematic process used to oversee the City's paved surfaces by measuring the condition and tracking pavement sections' maintenance and rehabilitation. These pavement sections can be organized by area, zones, and functional classifications. Effective pavement management strategies include condition assessment, life-cycle costs analysis, and budget projections to identify pavement segments needing maintenance or repair.

The City uses the MTC Pavement Management System, StreetSaver, to track and analyze the pavement condition and to develop the City's annual street maintenance/rehabilitation program. The StreetSaver

[2] Lane mile is equal to 5,280 linear feet multiplied by the number of lanes.

system is an online program used by all 109 cities and counties in the San Francisco Bay Area region and over 300 other public and private organizations nationwide and internationally. The StreetSaver online program helps agencies and organizations make informed decisions about their pavement assets.

Please note, the pavement management software is a network-level support tool for planning and budgeting purposes. The City is not bound by StreetSaver's recommendation and is not a substitute for sound engineering judgment. Pavement management projects can be manually added or removed from StreetSaver's recommended sections selected for treatment based on other special considerations.

Why is a Pavement Management System important?

The City's paved surfaces are a vital asset to the community. It is essential that this asset is preserved and maintained. The pavement management program seeks a balance between pavement maintenance and rehabilitation of existing surfaces. The most cost-effective way to correct any paved surface problem is to address issues when they first appear. That is why funds are targeted to paved areas or sections rated in fair or good condition for preventative maintenance[3]. Without maintenance, these paved asphalt concrete surfaces would quickly deteriorate and be more expensive to fix in the future.

Scope

As part of the P-TAP Round 25 grant, AMS was responsible for inspecting Arterial, Collector, and Residential/Local streets. A Pavement Condition Index (PCI) score was assigned for each pavement section, which gives a numerical indication of the pavement's current condition.

[3] Preventative maintenance is a planned activity, unlike pavement repair. Pavement repair is used to eliminate pavement distress such as a large pothole. Preventative maintenance is generally cyclic in nature and is intended to stop distresses before they occur.

The condition assessment results are used to determine the remaining useful life and develop ongoing major maintenance strategies. Cost analysis also provides the City with an understanding of its short-term pavement needs. This information projects the annual costs for maintenance and rehabilitation[4] to bring the overall network PCI to optimal conditions. Optimal conditions are when an agency has addressed all of its backlog needs. Backlog needs are defined as street segments identified in the needs assessment of the PMS requiring repair but not funded due to insufficient funding. Optimal conditions for the City of Morgan Hill have a network PCI that ranges from 83 to 84.

[4] Rehabilitation is pavement treatment to restore serviceability and extend the service life of the road. This may include partial recycling of the existing pavement or other work necessary to return an existing pavement to a condition of functional adequacy.

CURRENT STATE OF ROADS

Road Network[5]

The City's road network is classified into three functional classifications:

Arterial

These roadways provide a high degree of mobility while allowing direct access to abutting properties. These roadways serve major activity centers in an urban setting and have the highest volume and longest trip demand within a City. They interconnect other major corridors to accommodate trips entering and exiting the City. These roads also serve the need for "intra-area" travel between the business district and outlying Residential areas. An example of an Arterial in Morgan Hill is Cochrane Rd.

Also, Arterials primarily serve intra-urban or Local travel, carrying traffic from Collector streets to and from other parts of the City and limited access roadways. Access to properties bordering these streets is subordinate to the primary function of moving traffic. The typical design speed on an Arterial is 45 miles per hour, and it has two to four lanes, except in the case of some principal Arterials, which have six lanes. Parking is generally not provided on Arterials.

Collector

The primary function of Collector streets is a combination of access and mobility. These streets provide links between Local streets and Arterials. They are designed to serve neighborhood traffic rather than cross-town traffic, including trips between adjacent neighborhoods. The design speed for Collectors is typically 35 miles per hour. On-street parking is usually provided.

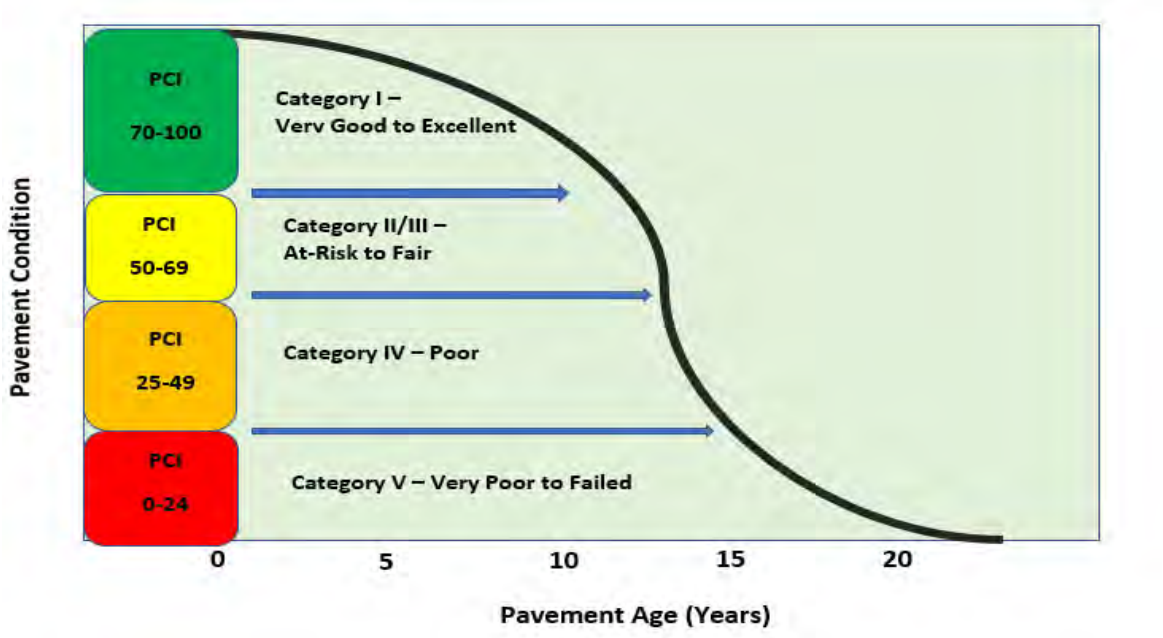
[5] These roads are consistent with the City's General Plan.

Residential/Local

Unlike other categories, Local roads are not intended for long-distance travel except at the origin or destination end of a trip. These roads are typically classified by default after Arterial and Collector streets have been identified. Local roads provide the highest level of accessibility and carry no through traffic movement. The primary function of local streets is access to adjacent land uses. Parking is usually offered along Local roads, and speed limits are typically 25 miles per hour.

Each street is not built the same and therefore does not share the same deterioration curves or have the same life expectancy. **Figure 1** is an example of the City's current life expectancy for pavement. The useful life for an Arterial is much shorter than a Residential street, which is due to the amount of traffic.

Figure 1. Pavement Life Expectancy



The City of Morgan Hill owns and manages 141.07 centerline miles of pavement. **Table 1** is a summary of the City's road network.

Table 1. City Network Summary Statistics

Functional Classification	Total Sections	Total Center Miles	Total Lane Miles	Total Area (SF)	PCI
Arterial	98	23.24	71.3	7,265,205	82
Collector	126	24.83	51.25	5,195,443	75
Residential/Local	782	93	186.53	16,974,369	70
	1,006.00	**141.07**	**309.08**	**29,435,017**	

Pavement Condition Assessment

A pavement surface assessment is completed by identifying surface distresses within each pavement management section. Inspections entail: evaluating a representative sample (10% of the area), identifying different pavement surface distresses (8 distress types), measuring severities (low, medium, and heavy), and quantifying them. **Figure 2** is an example of eight different surface distress types. Inspectors use StreetSaver as a tool to calculate the condition of each management section. StreetSaver is an industry-standard (modified ASTM 6433) software used to generate a pavement rating known as a PCI (Pavement Condition Index). A PCI rating is a numerical value between 0 to 100, with 0 being a failed road and 100 being a brand-new street (**Figure 3**). The PCI is calculated using StreetSaver system algorithms that MTC developed.

Figure 2. Sample of Pavement Distress Types

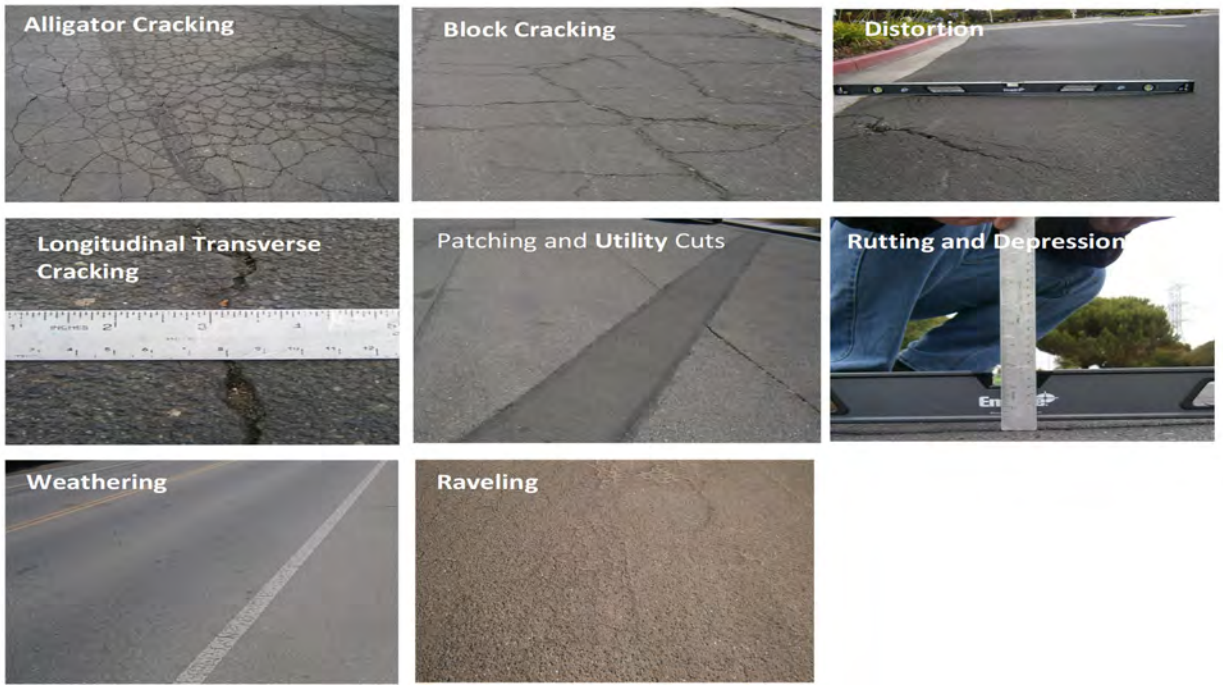


Figure 3. Sample of PCI Condition Categories

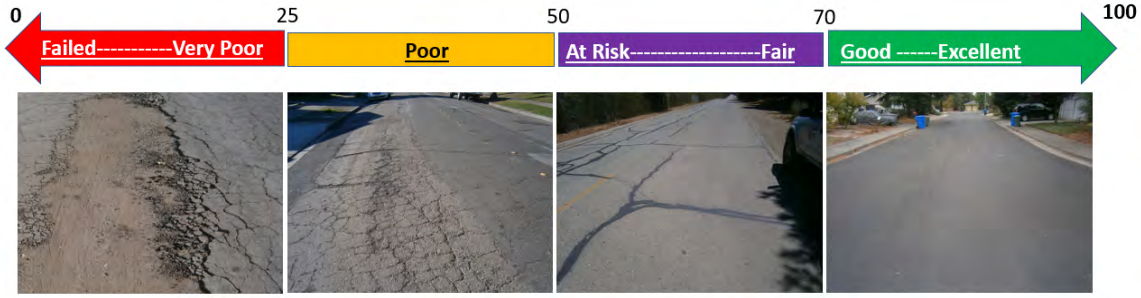
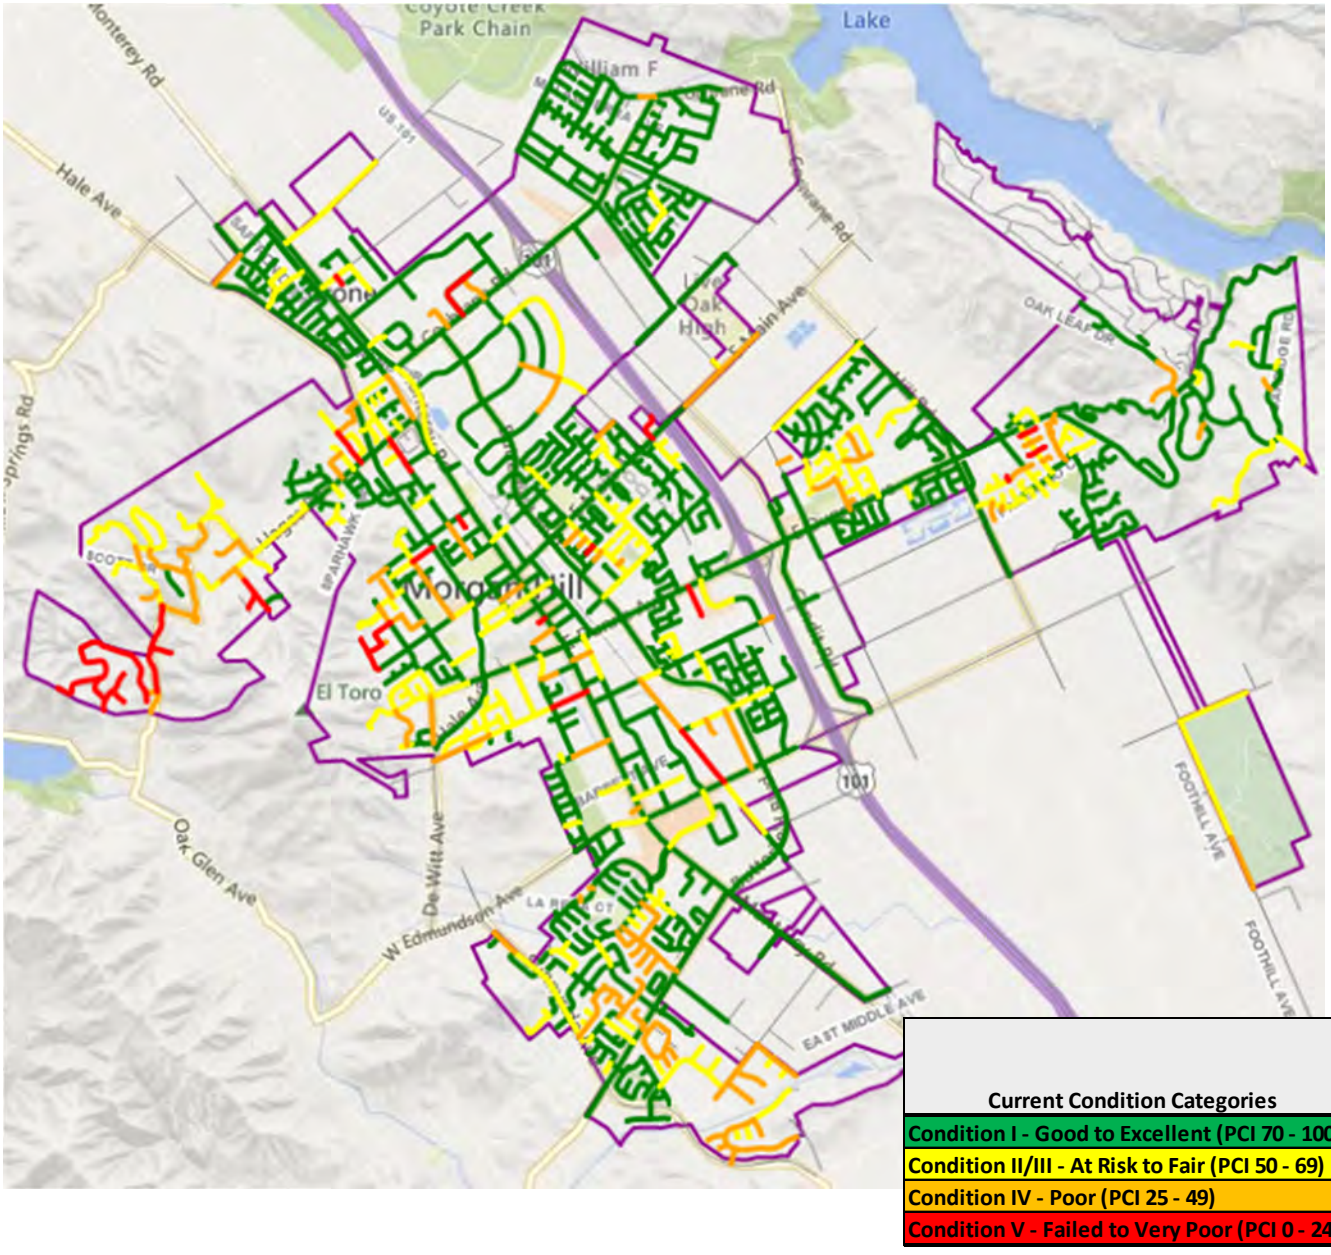


Pavement Condition Index (PCI)

After the 2024 pavement management update and recent pavement projects, the City's overall network PCI is 74 PCI. The overall network condition is a weighted average PCI equal to each management section PCI multiplied by its area and divided by the network's total area.

Figure 4 is a street-by-street map of the Pavement Condition Index.

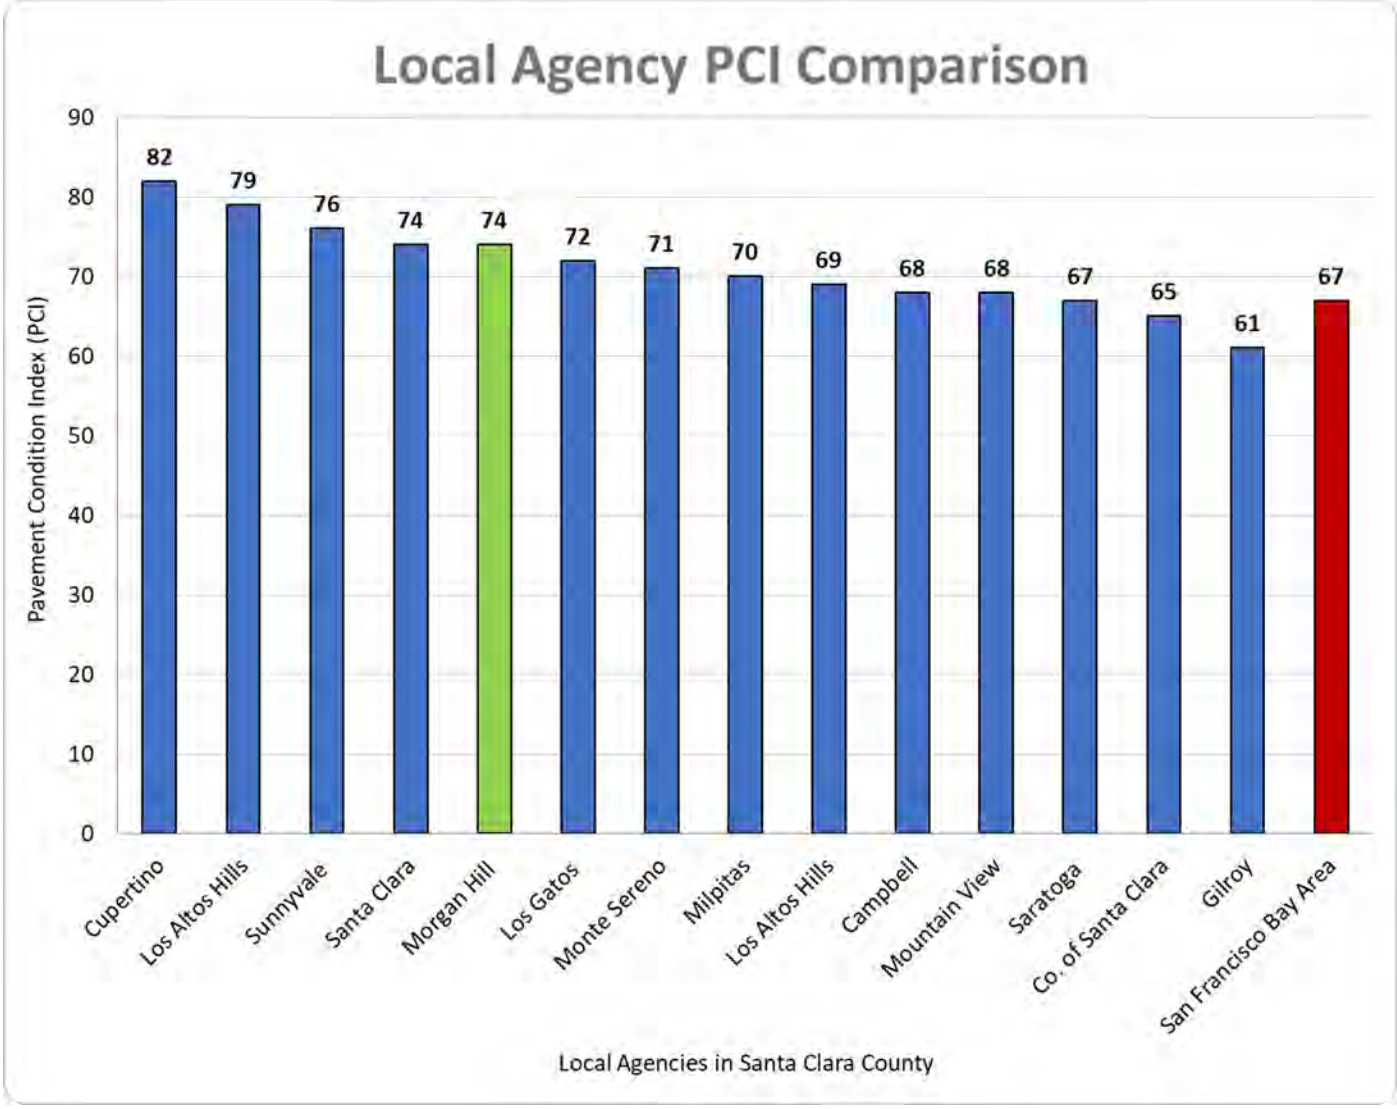
Figure 4. Street-by-Street Map of Pavement Condition Index (2024)



Local PCI Comparison

Figure 5 is a PCI comparison with Local agencies in Santa Clara County. Results for network PCI's were obtained from the MTC Vital Signs website[6]. MTC results show that the City's overall network PCI is 7 points above the San Francisco Bay Area average PCI.

Figure 5. Local Agency PCI Comparison



[6] https://mtc.ca.gov/sites/default/files/documents/2024-10/PCI_table_2023_data_10-30-2024.pdf

Table 2 is a breakdown of the City's current road network pavement condition categories. Approximately 72.2% of the City's road network has a PCI of 70 or better.

Table 2. Current Pavement Condition Categories

Current Condition Categories	Current
Condition I - Good to Excellent (PCI 70 - 100)	72.2%
Condition II/III - At Risk to Fair (PCI 50 - 69)	16.9%
Condition IV - Poor (PCI 25 - 49)	8.5%
Condition V - Failed to Very Poor (PCI 0 - 24)	2.4%

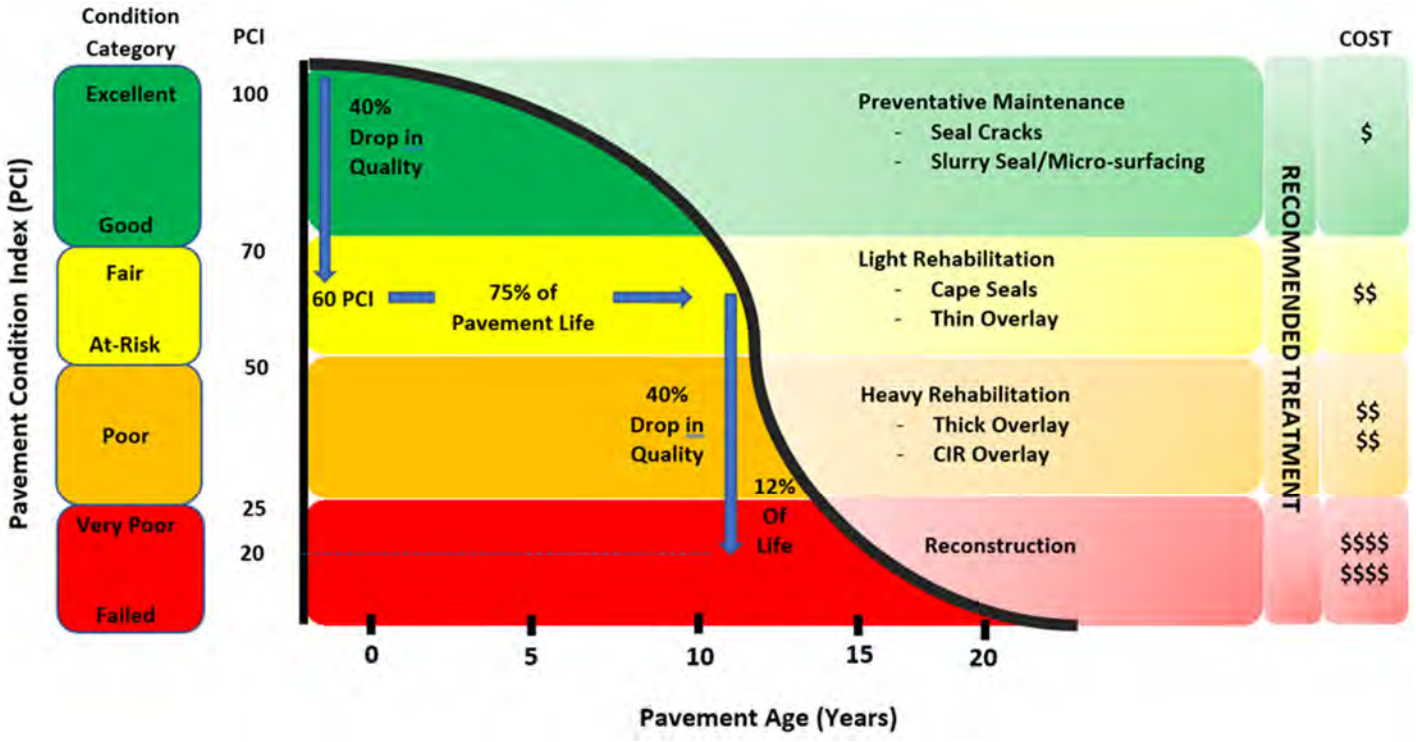
Maintenance and Rehabilitation Strategies

The City's current maintenance activities vary from project to project; each maintenance activity is based upon the section's functional classification (Arterial, Collector, and Residential), surface type, and PCI. **Figure 6** illustrates a general pavement life cycle curve. The curve shows that pavements deteriorate only 40 percent in quality in the first 74 percent of their life; this deterioration subsequently accelerates rapidly, resulting in another 40 percent drop in quality in the next 12 percent of life. Therefore, investing in preventative maintenance in streets classified in the "Good Condition" (70 and above) can save the City a significant amount of money in rehabilitation and reconstruction[7] costs in the future. Depending on the condition of the existing street, the appropriate roadway rehabilitation treatment method will be selected to regain strength to the existing pavement. Types of pavement rehabilitation are described below. MTC recommends that the City continue its preventative maintenance efforts to utilize the recommended cost-effective treatments such as crack seals and slurry seals. City staff has reviewed the maintenance strategies, and AMS has updated the StreetSaver pavement management system. Part of the update was to review and revise the system unit costs. These unit costs are used to calculate total funding and budget need calculation. These

[7] Reconstruction is equivalent to a new pavement structure where it involves removal and replacement of the existing pavement structure.

unit costs are "total project construction costs" that include but are not limited to construction, third-party testing & inspection, tree trimming, striping, and traffic loop/camera detector installation.

Figure 6. Standard Deterioration Curve



Below are the treatments for the City's maintenance strategies:

Seal Crack Treatment[8]- Preventative Maintenance Treatment

Surface Crack is an inevitable distress and is one of the first signs of distress at the pavement surface. If this distress is neglected over time, it can grow to a pothole and eventually sub-base failure if left untreated. Crack Sealing is a cost-effective treatment and can treat all types of cracks greater than 1/8". This treatment slows the deterioration and can extend pavement life by three to five years. This treatment is triggered every five years for Arterials and every four years for Collectors and Residential streets.

[8] https://roadresource.org/treatment_resources/crack_seal

Slurry Seals[9]- Preventative Maintenance Treatment

A slurry seal is a surface treatment with mixtures containing asphalt emulsion, graded aggregates, fillers, water, and other additives to control the break and set time of the mixes. These treatments are designed to extend the life of asphalt pavements in good condition by providing skid resistance, restricting moisture intrusion, protecting the structure from further oxidation and raveling, and restoring a uniform black appearance. The slurry seal provides quick construction times and minimal disruption to the traveling public and can extend the life of the pavement by five to seven years. The City addresses load-related distress before applying a slurry seal. The City's maintenance strategy for slurry seal and slurry seal with base failure repair is triggered to occur every eight years. Arterial, Collectors, and Residential streets have a maximum of two (2) slurry seals before the system recommend a restoration treatment that warrants an AC Overlay with Fabric (3.9").

Cape Seals[10]- Preventative Maintenance Treatment

A cape seal is a roadway surface treatment designed to extend the life of pavements in fair to good condition, consisting of a chip seal treatment, which is then covered by a slurry seal or micro surfacing treatment. Cape seals provide the benefits of both the chip seal and the slurry seal or micro surfacing treatment, namely sealing moderate cracks, providing skid resistance, sealing the pavement against moisture intrusion, protecting the structure from further oxidation and raveling, and restoring a uniform black appearance.

The chip seal can be polymer modified as well to improve aggregate retention and provide for a quicker return to traffic. Cape seals boast quick construction times and reasonable disruption to the traveling public. This treatment excels in urban areas where a stand alone chip seals are not be welcomed but the need for sealing cracks is warranted.

[9] https://roadresource.org/treatment_resources/slurry_seal
[10] https://roadresource.org/treatment_resources/cape_seal

AC Overlay - Rehabilitation Treatment

This treatment targets pavement that is at-risk to fair condition without signs of load-related distress. The treatment generally involves wedge/ conform grinding the edges of existing pavement and placing a new layer of asphalt concrete (AC) on top of the existing pavement. Asphalt concrete, also known as Hot Mix Asphalt (HMA), is a mixture of asphalt oil, crushed rock, gravel, and sand.

Mill and AC Overlay - Rehabilitation Treatment

This treatment targets streets in at-risk to fair condition with signs of load-related distresses with necessary profile grade adjustment. The treatment consists of cold milling (also known as cold plane/grinding) the existing surface to a pre-determined depth with specialized milling equipment to provide properly required grades. A new layer of asphalt concrete is then placed after the completion of the milling operation.

Cold-in-Place Recycling (CIPR) [11]- Rehabilitation Treatment

CIPR is a cost-effective, long-lasting, greener alternative to conventional maintenance and rehabilitation techniques. Cold In-place Recycling (CIR) is a process that cold mills and recycles the top 2-5 inches of asphalt using a continuous train operation. CIR significantly reduces trucking, time, and natural resources to substantially lower project costs by reusing existing material. Generally, any road that is a candidate for mill & fill is a candidate for CIR. This treatment adds fifteen-twenty years of service life with a combined appropriate wearing course. This treatment is typically 20%-50% less expensive than conventional maintenance and reconstruction methods but requires a lot of upfront coordination with various utility agencies to ensure that there are no ultility facilities within the 2-5 inches of existing asphalt that will be milled.

Full-Depth-Reclamation (FDR)[12] – Deep Rehabilitation

FDR is a cost-effective, long-lasting, greener alternative to deep rehabilitation or removal and replacement techniques. Full Depth Reclamation (FDR) is an engineered rehabilitation technique. The

[11] https://roadresource.org/treatment_resources/cold_in_place_recycling
[12] https://roadresource.org/treatment_resources/full_depth_reclamation

entire thickness of the asphalt pavement and a predetermined portion of the underlying materials (base, subbase, and subgrade) is uniformly pulverized and blended to provide an upgraded, homogeneous material. The reclaimed materials may be improved and strengthened by using Mechanical, Chemical, or Bituminous stabilization. FDR isn't only for roads in poor condition; it is also a viable design process for increasing pavement's structural capacity in good condition but requires a lot of upfront coordination with various utility agencies to ensure that there are no ultility facilities within the existing asphalt and underlying materials that will be pulverized.

Reconstruction

Pavement reconstruction is a treatment that is needed when a road has reached the end of its design life, or the pavement has severe cross-section deficiencies due to traffic or environmental factors. These roads typically have a PCI of 25 and below, and reconstruction is required to restore the service life. Reconstruction is equivalent to a new pavement that involves rebuilding the pavement layers from the ground up to replace the pavement. This treatment is the most expensive in comparison to the other treatments in the maintenance strategy.

Table 3 shows the City's current maintenance strategies for Arterial, Collector, and Residential streets, with Arterial roads having the highest priority, followed by Collector and then Residential. Arterial streets have the highest priority due to the high traffic volume.

Table 3. Maintenance Strategies for Arterial, Collector, and Residential streets.

Functional Class	Surface Type	PCI Range	Condition Category	Treatment Type	Treatment	Cost /Square Yard	Years between Crack Seal	Years between Surface Seals	# of Surface Seals before Overlay
Arterial	AC	70 - 100	Condition I - Good to Excellent	Crack Treatment	SEAL CRACKS	$1.50*	3		
		70 - 100	Condition I - Good to Excellent	Surface Treatment	SLURRY SEAL - TYPE II	$7.50		7	
		70 - 100	Condition I - Good to Excellent	Restoration Treatme	2 IN AC OVERLAY	$41.50			2
		50 - 69	Condition II/III - At Risk to Fair (Non-Load Related)		2 IN AC OVERLAY	$41.50			
		50 - 69	Condition II/III - At Risk to Fair(Load Related)		2 IN AC OVERLAY	$41.50			
		25 - 49	Condition IV - Poor		MILL AND OVERLAY	$47.00			
		0 - 25	Condition V - Failed to Very Poor		RECONSTRUCTION	$145.00			
Collector	AC	70 - 100	Condition I - Good to Excellent	Crack Treatment	SEAL CRACKS	$1.50	3		
		70 - 100	Condition I - Good to Excellent	Surface Treatment	SLURRY SEAL - TYPE II	$7.50		7	
		70 - 100	Condition I - Good to Excellent	Restoration Treatme	2 IN AC OVERLAY	$41.50			2
		50 - 69	Condition II/III - At Risk to Fair (Non-Load Related)		2 IN AC OVERLAY	$41.50			
		50 - 69	Condition II/III - At Risk to Fair(Load Related)		2 IN AC OVERLAY	$41.50			
		25 - 49	Condition IV - Poor		MILL AND OVERLAY	$47.00			
		0 - 25	Condition V - Failed to Very Poor		RECONSTRUCTION	$145.00			
Residential	AC	70 - 100	Condition I - Good to Excellent	Crack Treatment	SEAL CRACKS	$1.50	3		
		70 - 100	Condition I - Good to Excellent	Surface Treatment	SLURRY SEAL - TYPE II	$5.50		7	
		70 - 100	Condition I - Good to Excellent	Restoration Treatme	2 IN AC OVERLAY	$41.50			2
		50 - 69	Condition II/III - At Risk to Fair (Non-Load Related)		CAPE SEAL	$17.74			
		50 - 69	Condition II/III - At Risk to Fair(Load Related)		2 IN AC OVERLAY	$41.50			
		25 - 49	Condition IV - Poor		MILL AND OVERLAY	$47.00			
		0 - 25	Condition V - Failed to Very Poor		RECONSTRUCTION	$115.00			

*Seal Cracks are defined in Cost / Lineal Foot.

Pavement Needs for Optimal PCI

The pavement management program develops a maintenance strategy to improve the road network's overall condition to an optimal PCI (83-84 PCI range). The overall weighted average PCI is 74 PCI, which is within the "*Good to Excellent* Category." This scenario answers the most common question, "if the City had all the money in the world, what would it cost to update the road network?" **Table 4** below represents the 5-Year breakdown to get the road network into optimal conditions and address the backlog. Currently, the City's backlog is approximately $32.4 million. The backlog is derived from the work scheduled in prior years but deferred due to insufficient funding resources. Please note that the cost of the needs has been front-loaded. The front-loaded costs are due to the pavement management system's need to bring the entire pavement network to optimal conditions and maintain those conditions for the next five years. To keep the PCI at optimal levels, the City would need to spend approximately $65.7 million by the end of 2029. The pavement management software is more cost-effective to repair the street in the first year rather than waiting to fix them in the subsequent years. Generally speaking, roads appear to be in good condition for a long time; however, when roads fail,

they fail quickly, and repair costs can increase if the recommended maintenance treatments are deferred. Should the City not invest in maintenance or rehabilitation treatments on streets for the next five years, the overall network PCI will decrease to 67.

Table 4. 5-Year Needs Breakdown for Optimal PCI[13]

City Needs					
Year	**PM**	**Rehab Cost**	**Total**	**PCI Treated**	**PCI Untreated**
2025	$8,260,172	$24,110,321	$32,370,493	83	74
2026	$1,362,981	$9,223,115	$10,586,096	83	72
2027	$1,528,686	$7,965,130	$9,493,816	84	71
2028	$1,017,406	$5,058,444	$6,075,850	84	69
2029	$2,349,081	$4,846,652	$7,195,733	84	67
	$14,518,326	$51,203,662	$65,721,988		

[13] The results of the budget needs analysis use a 3% interest and 4.5% inflation factor. These costs are in today's dollars.

BUDGET SCENARIOS

After inspecting the City's roadway conditions and evaluating the maintenance and rehabilitation needs, the next step in developing a cost-effective maintenance and rehabilitation strategy is to run "what-if" scenarios. The advantage of a pavement management program such as StreetSaver is the ability to forecast the treatments and conditions based on budget constraints or predict future costs based on targeted network PCI goals. The following scenarios have been analyzed:

Scenario 1 – Current Budget

- Average funding of $3.5M per year for maintenance and rehabilitation.
- PCI decreases to 73 at the end of five years.
- Backlog increases from $32.4M to $44.9M at the end of five years.
- 66% of City streets will have a PCI equal to or greater than 70.

Scenario 2 – Constant PCI

- Average funding of $3.8M per year for maintenance and rehabilitation.
- PCI will remain constant at 74 at the end of five years.
- Backlog increases from $32.4M to $37.5M at the end of five years.
- 68.7% of City streets will have a PCI equal to or greater than 70.

Scenario 3 – Plus 5 PCI Increase

- Average funding of $7.9M per year for maintenance and rehabilitation.
- PCI increases to 79 PCI at the end of five years.
- Backlog decreases from $32.4 to $20.4M at the end of five years.
- 86.6% of City streets will have a PCI equal to or greater than 70.

Scenario 4 – Unconstrained Funding

- Average funding of $13.1M per year on maintenance and rehabilitation.
- PCI increases to 84 PCI at the end of five years.
- Backlog decreases from $32.4M to $0 at the end of five years.
- 95.3% of City streets will have a PCI equal to or greater than 70.

Scenario 5 – No Funding

- Average funding of $0 per year on maintenance and rehabilitation.
- PCI decreases to 67 at the end of five years.
- Backlog increases from $32.4M to $58.4M at the end of five years. 55.2% of City streets will have a PCI equal to or greater than 70.

Table 5. Scenario Summary

	Scenario 1. Current Budget	Scenario 2. Constant PCI	Scenario 3. Plus 5 PCI Increase	Scenario 4. Unconstrained Funding	Scenario 5. No Funding
Average Yearly Budget	$3,500,000	$3,800,000	$7,870,060	$13,107,697	$0
Total Budget for 5 Years	$17,500,000	$19,000,000	$39,350,300	$65,538,485	$0
Current PCI	74	74	74	74	74

% 'Very Poor' in 5 years	4.2	4.2	4.2	0.0	5.4

Scenario 1 – Current Budget

The City's current budget is approximately $3.5 million per year or $17.5 million at the end of five years. Implementing this budget scenario **(Figure 7, Table 6)** shows that the PCI decreases to 73 by the end of 2029, while the backlog would increase to $44.9 million.

Figure 7. Scenario 1. Current Budget PCI and Backlog

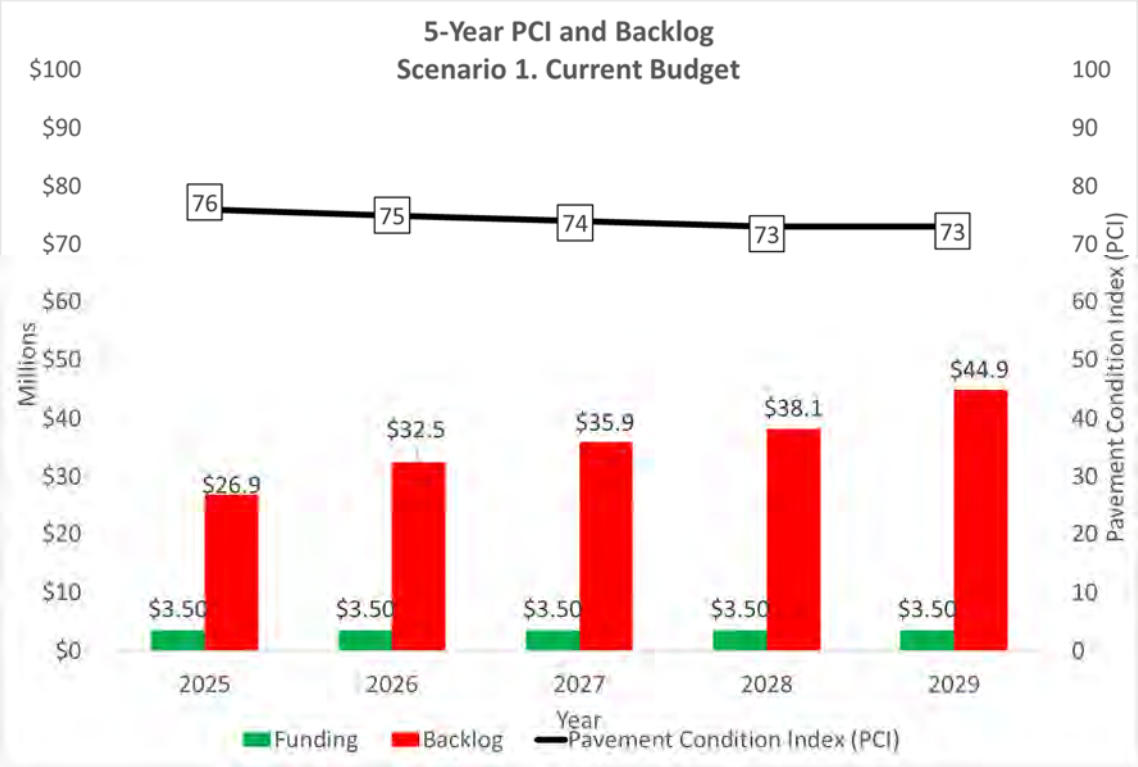

Table 6. Scenario 1. Current Budget Summary

Scenario 1. Current Budget			
Year	**Budget**	**Backlog**	**PCI**
2025	$3,500,000	$26,904,768	76
2026	$3,500,000	$32,484,236	75
2027	$3,500,000	$35,911,304	74
2028	$3,500,000	$38,131,344	73
2029	$3,500,000	$44,885,813	73

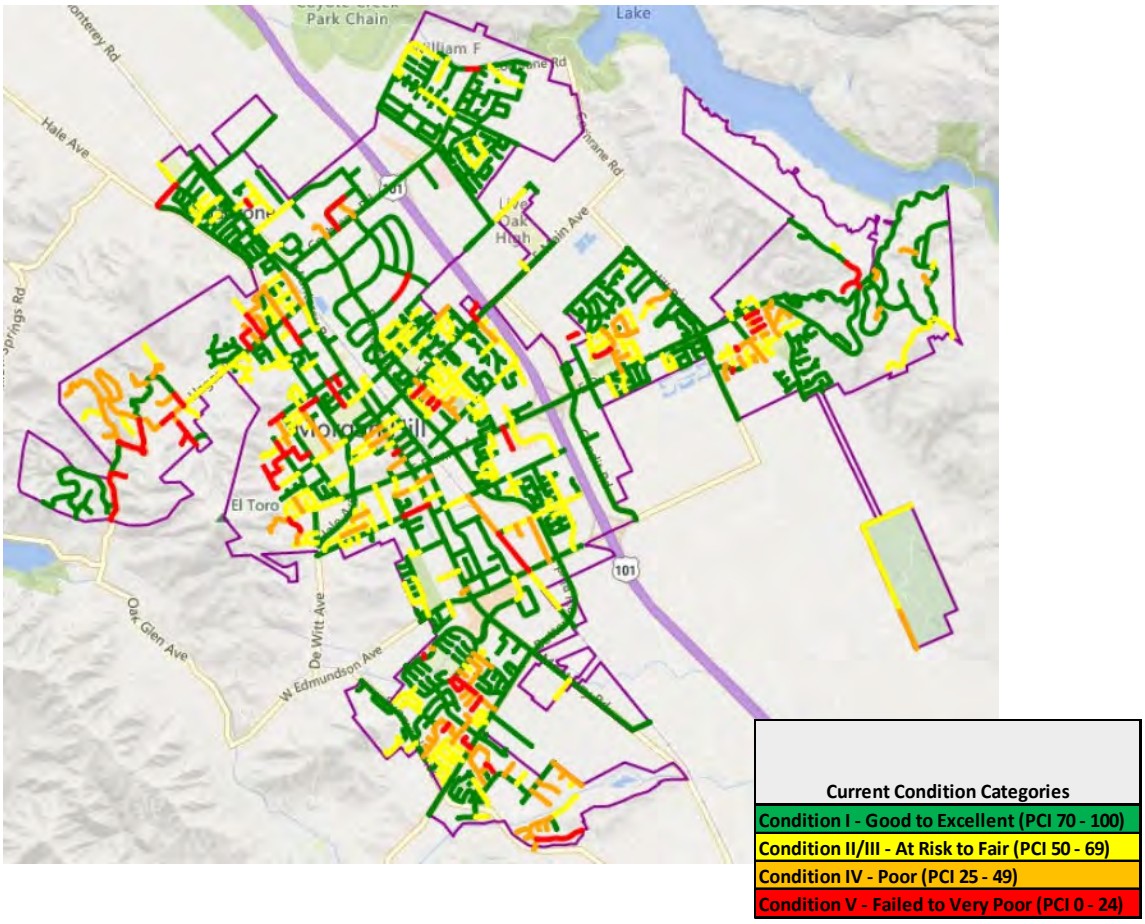
Approximately 66% (**Table 7)** of City streets will have a PCI equal to or greater than 70 PCI at the end of the year 2029 (Condition Category I).

Table 7. Scenario 1. Current Budget - 2029 Condition Category Summary

	Scenario 1. Current Budget	% Change at end of 5 years
% 'Good' in 5 years	66	-5.5
% 'Fair' in 5 years	21.6	4.2
% 'Poor' in 5 years	8.2	-0.6
% 'Very Poor' in 5 years	4.2	1.9

Figure 8 is a projected PCI map of 2029 if the "Current Budget" is implemented.

Figure 8. Scenario 1. Current Budget PCI Map - 2029 Condition Category Summary



Scenario 2 – Constant PCI

This scenario (**Figure 9, Table 8)** analyzes the cost to sustain the overall network PCI at 74. Results show that it would cost approximately $3.8 million per year or $19 million for five years. This iteration indicates that the backlog decreases to $37.5 million by the end of the year 2029.

Figure 9. Scenario 2. Constant PCI and Backlog

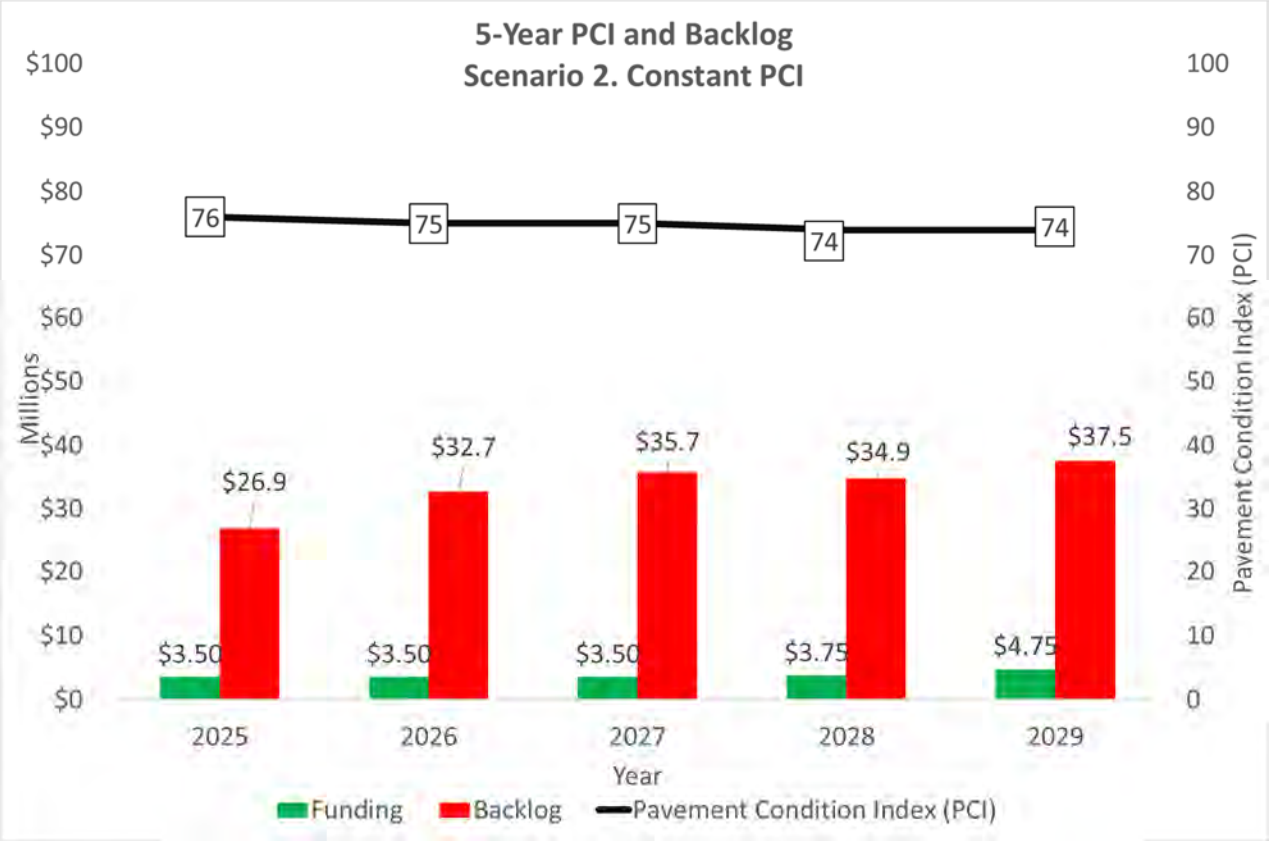


Table 8. Scenario 2. Constant PCI Summary

Scenario 2. Constant PCI			
Year	**Budget**	**Backlog**	**PCI**
2025	$3,500,000	$26,906,025	76
2026	$3,500,000	$32,686,575	75
2027	$3,500,000	$35,724,265	75
2028	$3,750,000	$34,854,428	74
2029	$4,750,000	$37,543,969	74

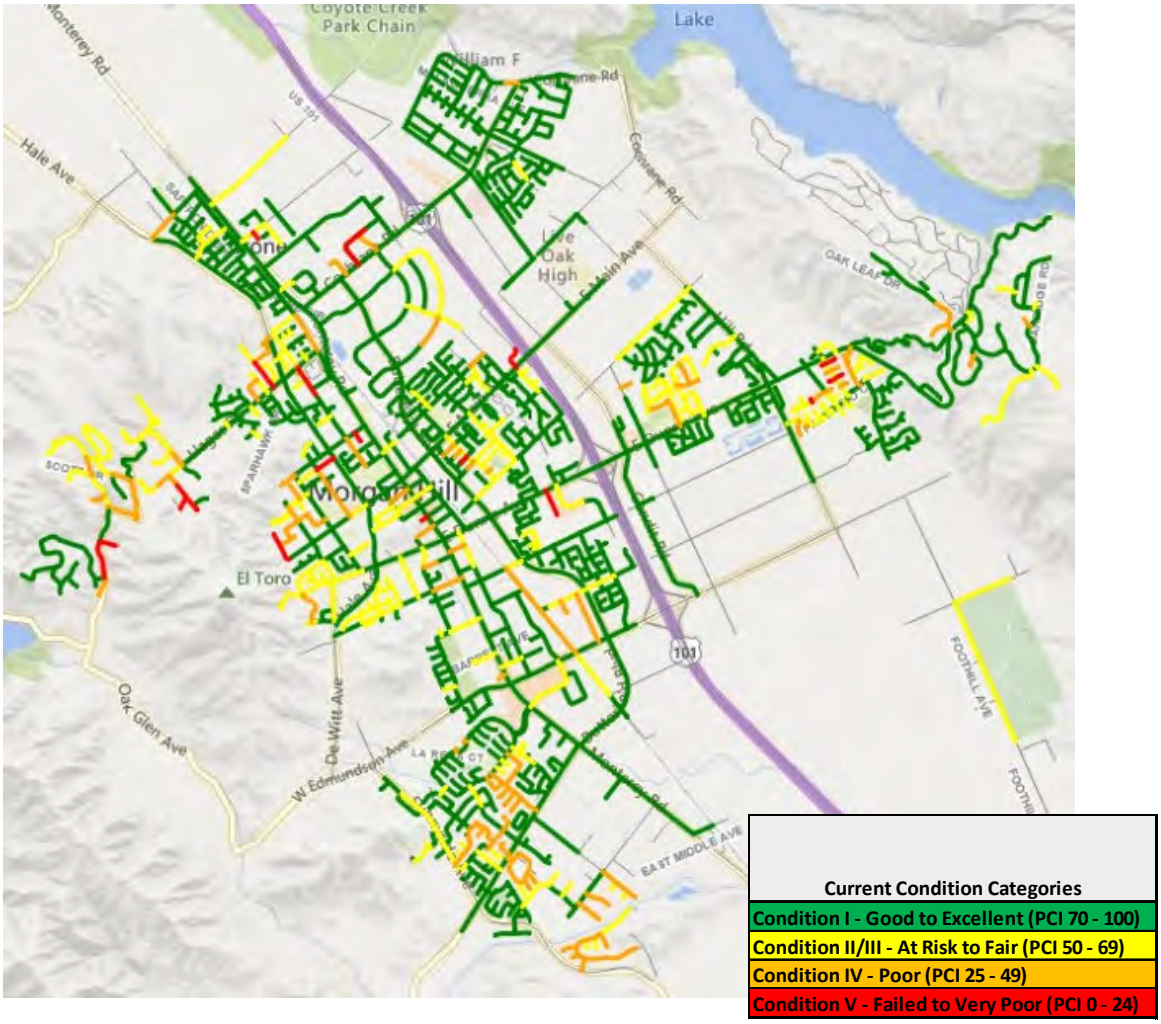
Approximately 68.7% (**Table 9)** of City streets will have a PCI equal to or greater than 70 PCI at the end of the year 2029 (Condition Category I).

Table 9. Scenario 2. Constant PCI - 2029 Condition Category Summary

	Scenario 2. Constant PCI	% Change at end of 5 years
% 'Good' in 5 years	68.7	-3.5
% 'Fair' in 5 years	18.3	1.4
% 'Poor' in 5 years	8.8	0.3
% 'Very Poor' in 5 years	4.2	1.8

Figure 10 is a projected PCI map of 2029 if the "Constant PCI" scenario is implemented

Figure 10. Scenario 2. Constant PCI Map - 2029 Condition Category Summary



Scenario 3 – Plus 5 PCI Increase

Figure 11, Table 10 represents the costs and impacts of increasing the overall network by 5 points (79 PCI). Implementing this scenario would cost approximately $7.9 million annually or about $39.4 million by the end of five years. In addition, this scenario decreases the backlog to $20.4 million at the end of the five year period.

Figure 11. Scenario 3. Plus 5 PCI Increase and Backlog

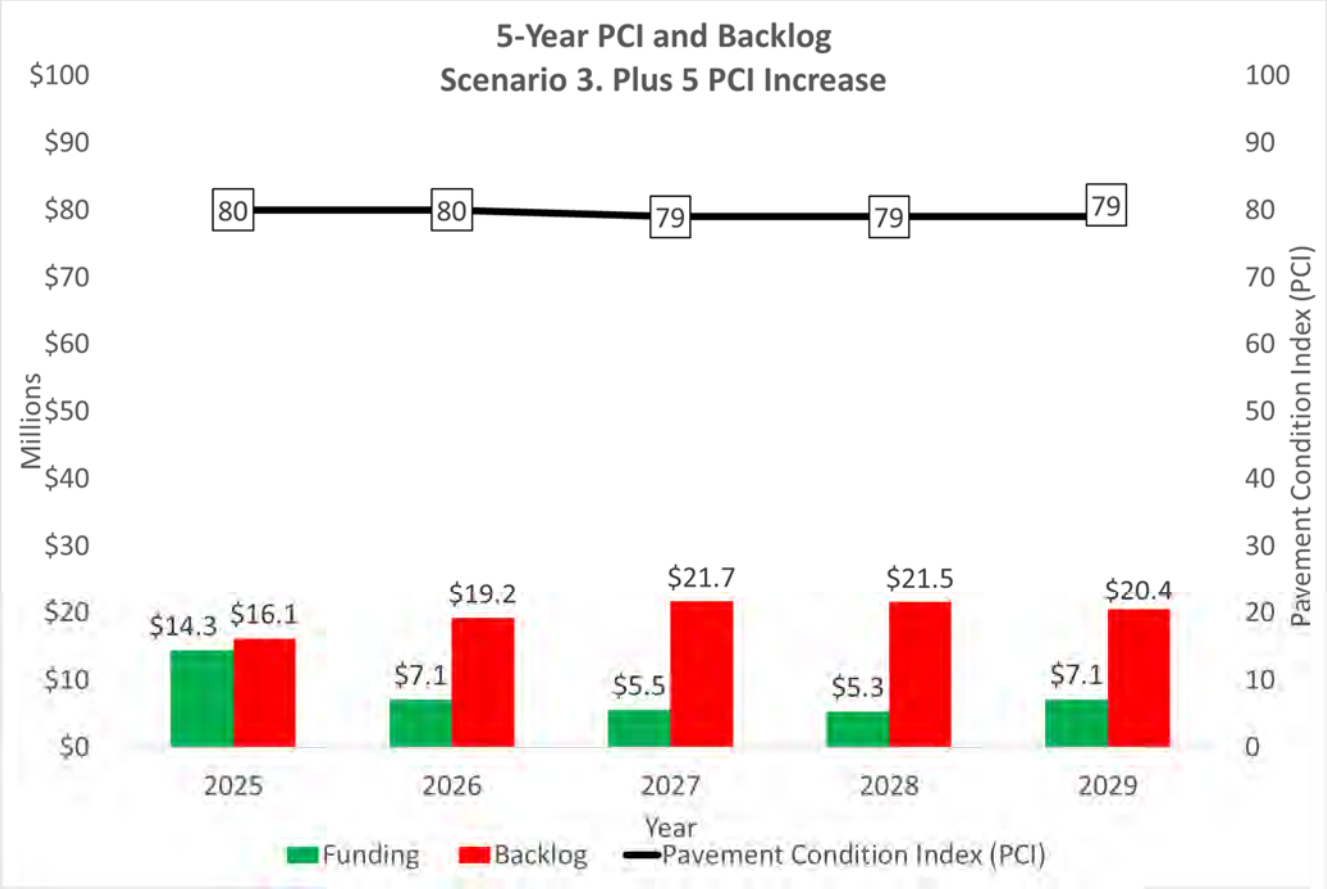


Table 10. Scenario 3. Plus 5 PCI Increase Summary

Scenario 3. Plus 5 PCI Increase			
Year	**Budget**	**Backlog**	**PCI**
2025	$14,316,430	$16,089,385	80
2026	$7,053,253	$19,162,330	80
2027	$5,529,249	$21,681,577	79
2028	$5,306,817	$21,542,793	79
2029	$7,144,551	$20,420,180	79

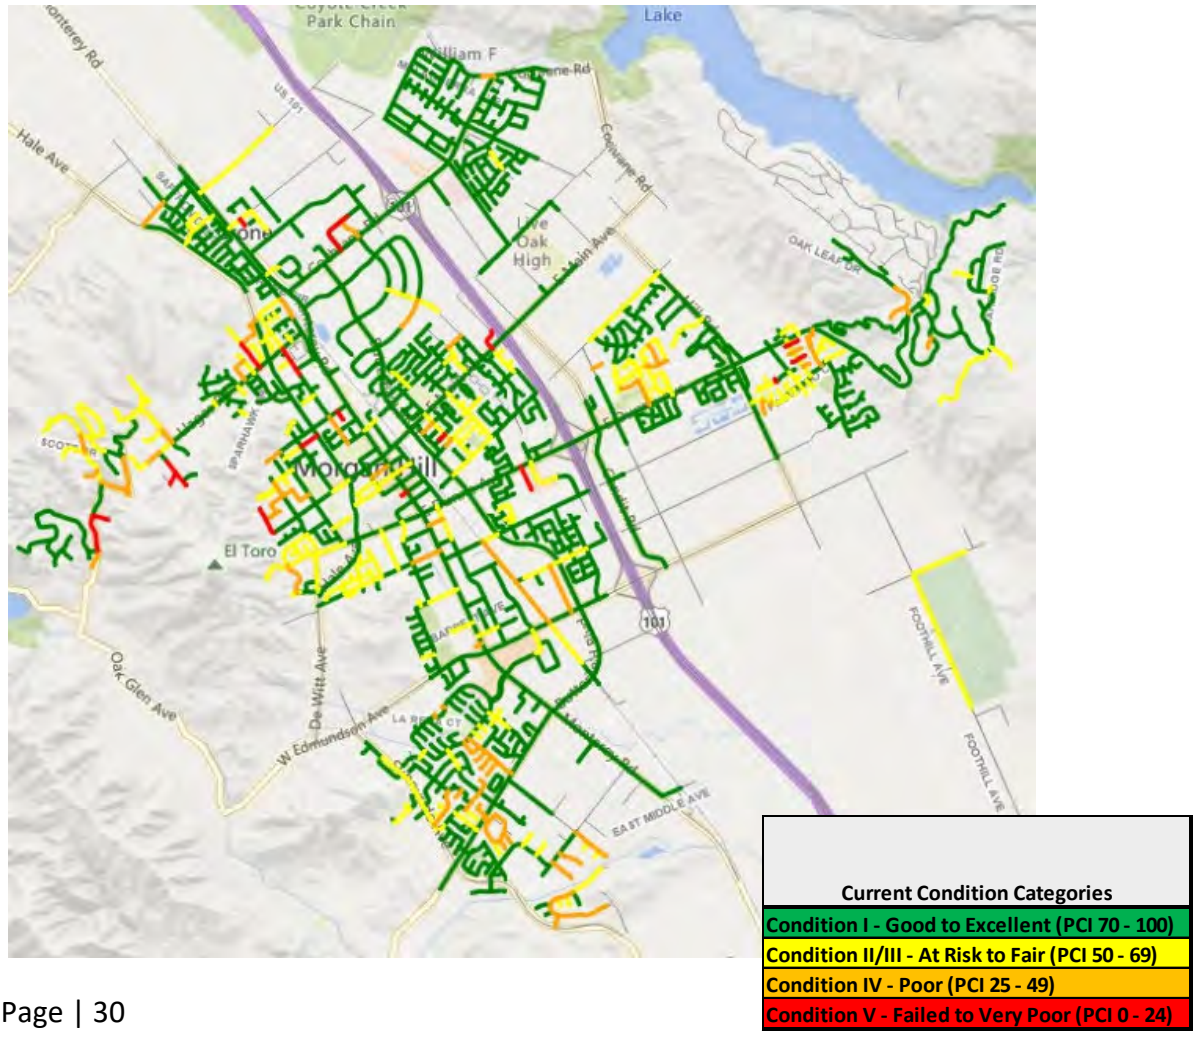
Approximately 86.6% (**Table 11)** of City streets will have a PCI equal to or greater than 70 PCI at the end of the year 2029 (Condition Category I).

Table 11. Scenario 3. Plus 5 PCI Increase - 2029 Condition Category Summary

	Scenario 3. Plus 5 PCI Increase	% Change at end of 5 years
% 'Good' in 5 years	86.6	14.4
% 'Fair' in 5 years	7.5	-9.4
% 'Poor' in 5 years	1.7	-6.8
% 'Very Poor' in 5 years	4.2	1.8

Figure 12 is a projected PCI map of 2029 if the "Plus 5 PCI Increase" scenario is implemented.

Figure 12. Scenario 3. Plus 5 PCI Increase PCI Map - 2029 Condition Category Summary



Scenario 4 – Unconstrained Funding

Figure 13, Table 12, represents the costs and impacts of implementing an unconstrained budget. Results show that it would bring the City's network to optimal conditions and cost approximately $13.1 million per year or $65.5 million for five years. Implementing this scenario would increase the overall network PCI to 84, while the backlog would decrease from $32.4 million to $0 by the end of 2029.

Figure 13. Scenario 4. Unconstrained Funding PCI and Backlog

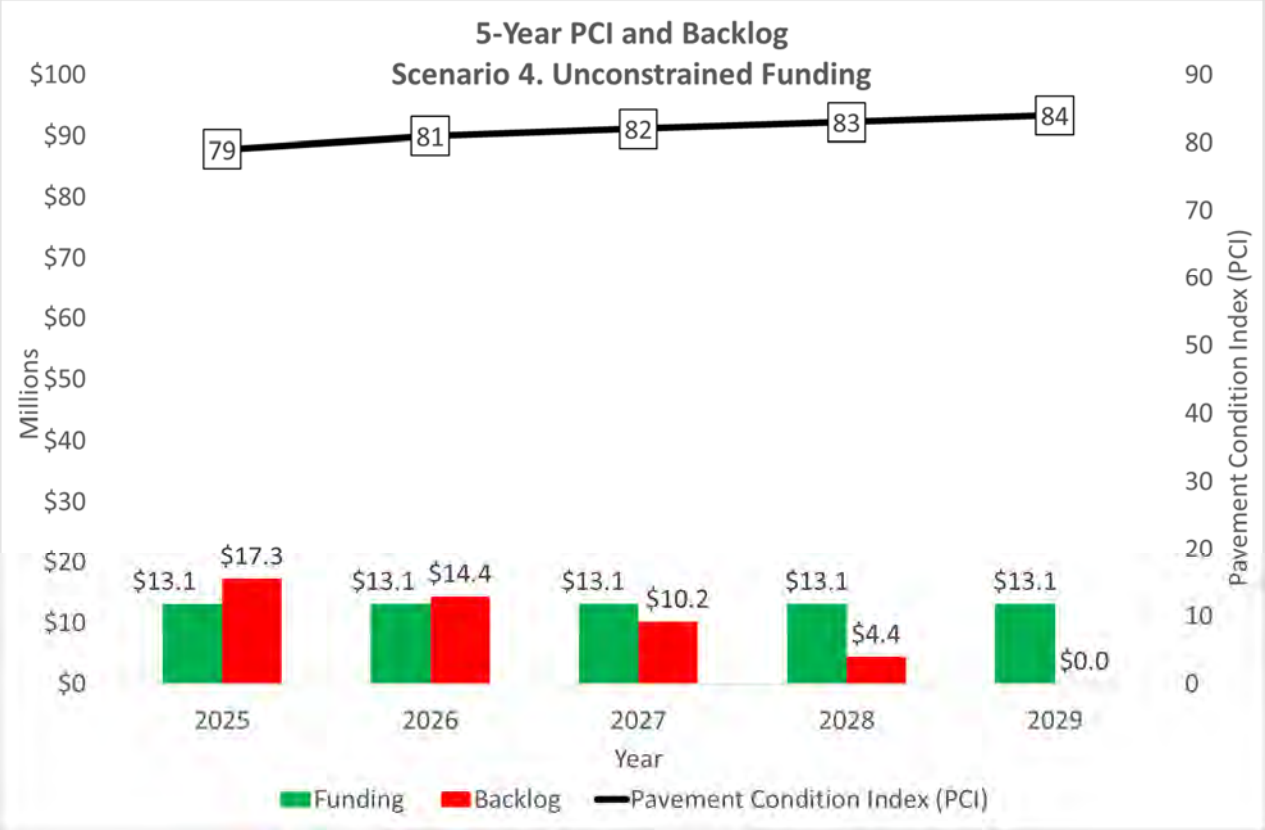


Table 12. Scenario 4. Unconstrained Funding Summary

Scenario 4. Unconstrained Funding			
Year	**Budget**	**Backlog**	**PCI**
2025	$13,107,697	$17,297,334	79
2026	$13,107,697	$14,379,410	81
2027	$13,107,697	$10,186,786	82
2028	$13,107,697	$4,425,842	83
2029	$13,107,697	$0	84

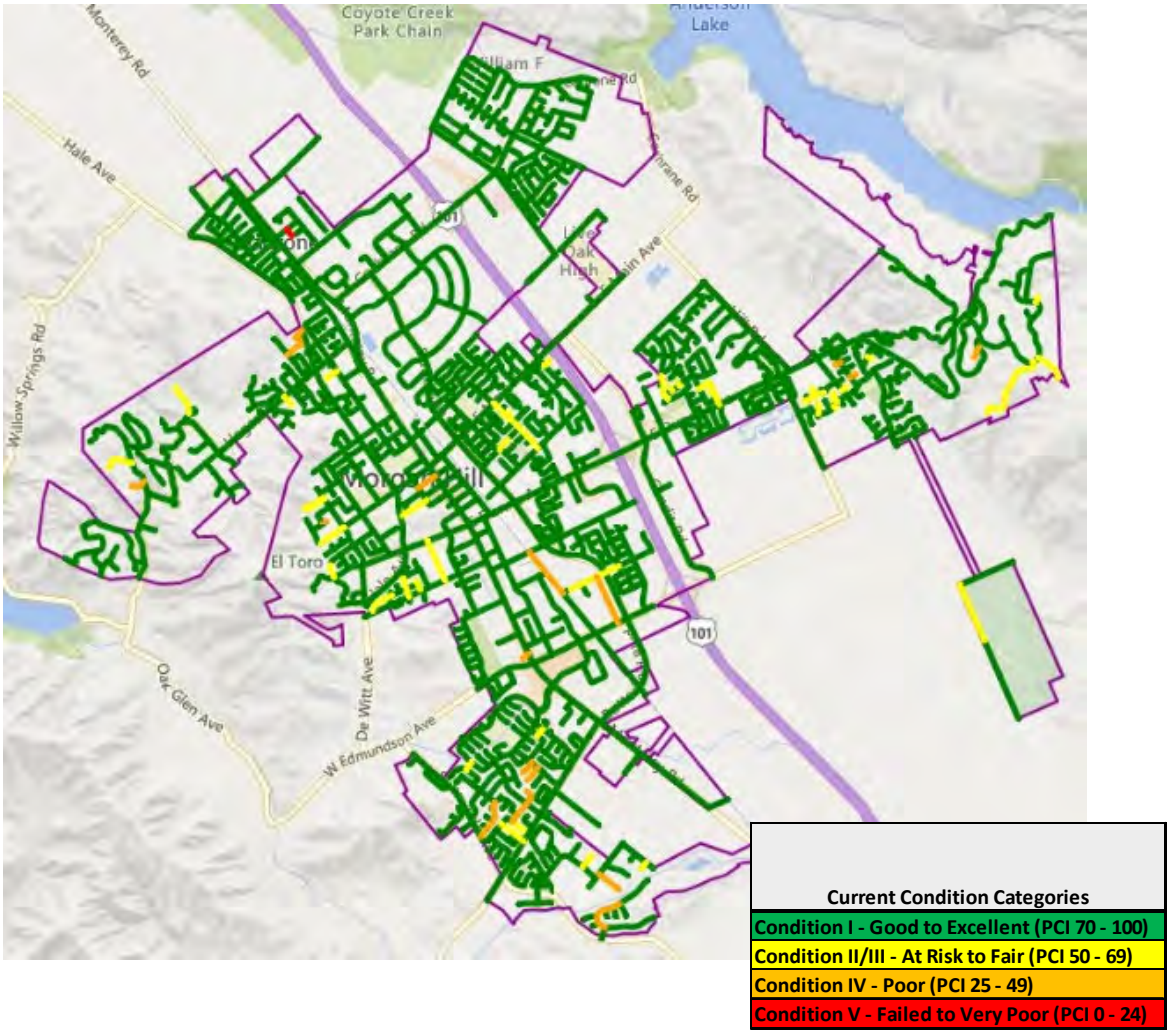
Approximately 95.3% (**Table 13)** of City streets will have a PCI equal to or greater than 70 PCI at the end of the year 2029 (Condition Category I).

Table 13. Scenario 4. Unconstrained Funding - 2029 Condition Category Summary

	Scenario 4. Unconstrained Funding	% Change at end of 5 years
% 'Good' in 5 years	95.3	23.8
% 'Fair' in 5 years	3	-14.4
% 'Poor' in 5 years	1.7	-7.1
% 'Very Poor' in 5 years	0	-2.3

Figure 14 is a projected PCI map of 2029 if the "Unconstrained Funding" scenario is implemented.

Figure 14. Scenario 4. Unconstrained Funding Map - 2029 Condition Category Summary



Scenario 5 – No Funding

Figure 15, Table 14, represents the costs and impacts of implementing an unfunded scenario. Implementing this scenario would decrease the overall network PCI to 67, while the backlog would increase from $32.4 million to about $58.4 million by the end of 2029.

Figure 15. Scenario 5. No Funding PCI and Backlog

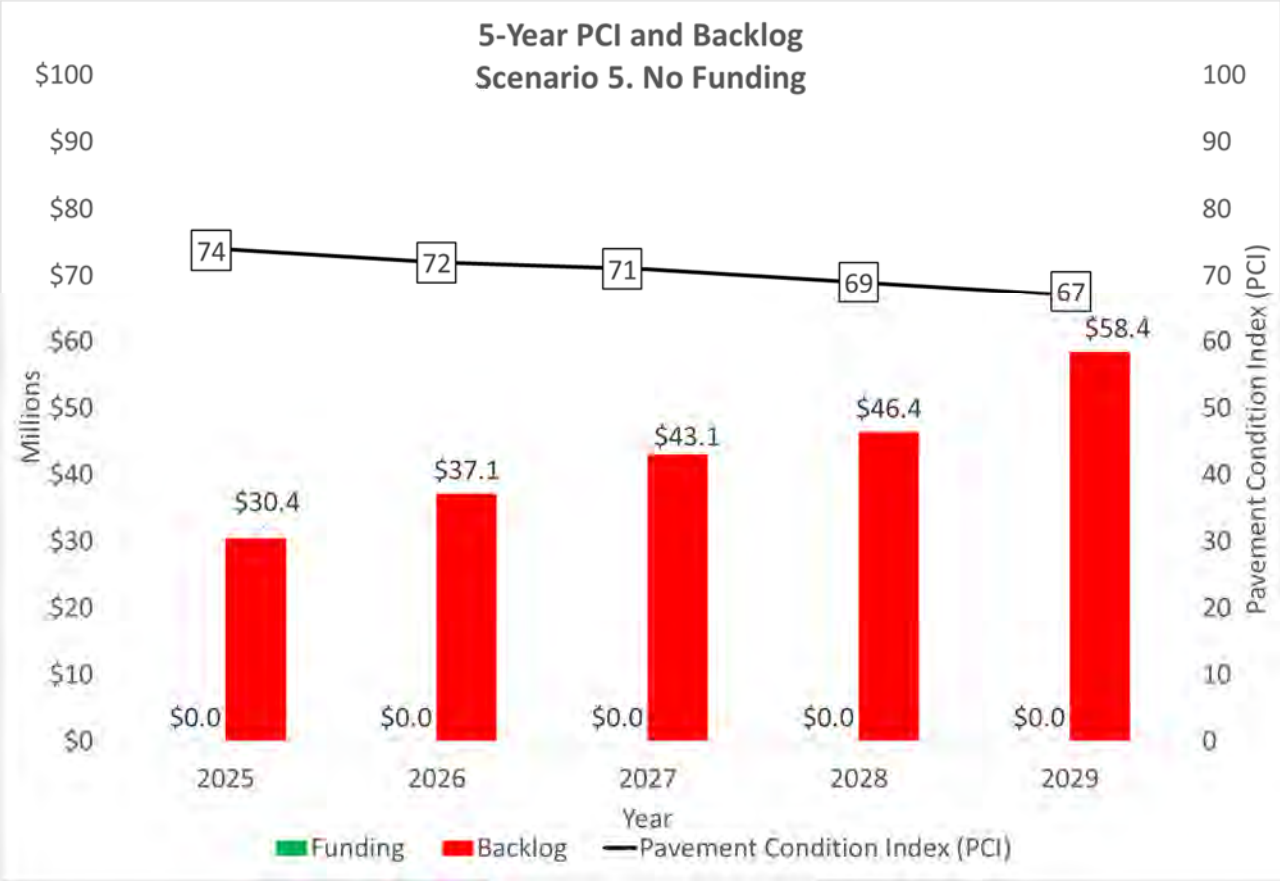


Table 14. Scenario 5. No Funding Summary

Scenario 5. No Funding			
Year	**Budget**	**Backlog**	**PCI**
2025	$0	$30,404,658	74
2026	$0	$37,128,921	72
2027	$0	$43,081,079	71
2028	$0	$46,380,470	69
2029	$0	$58,411,192	67

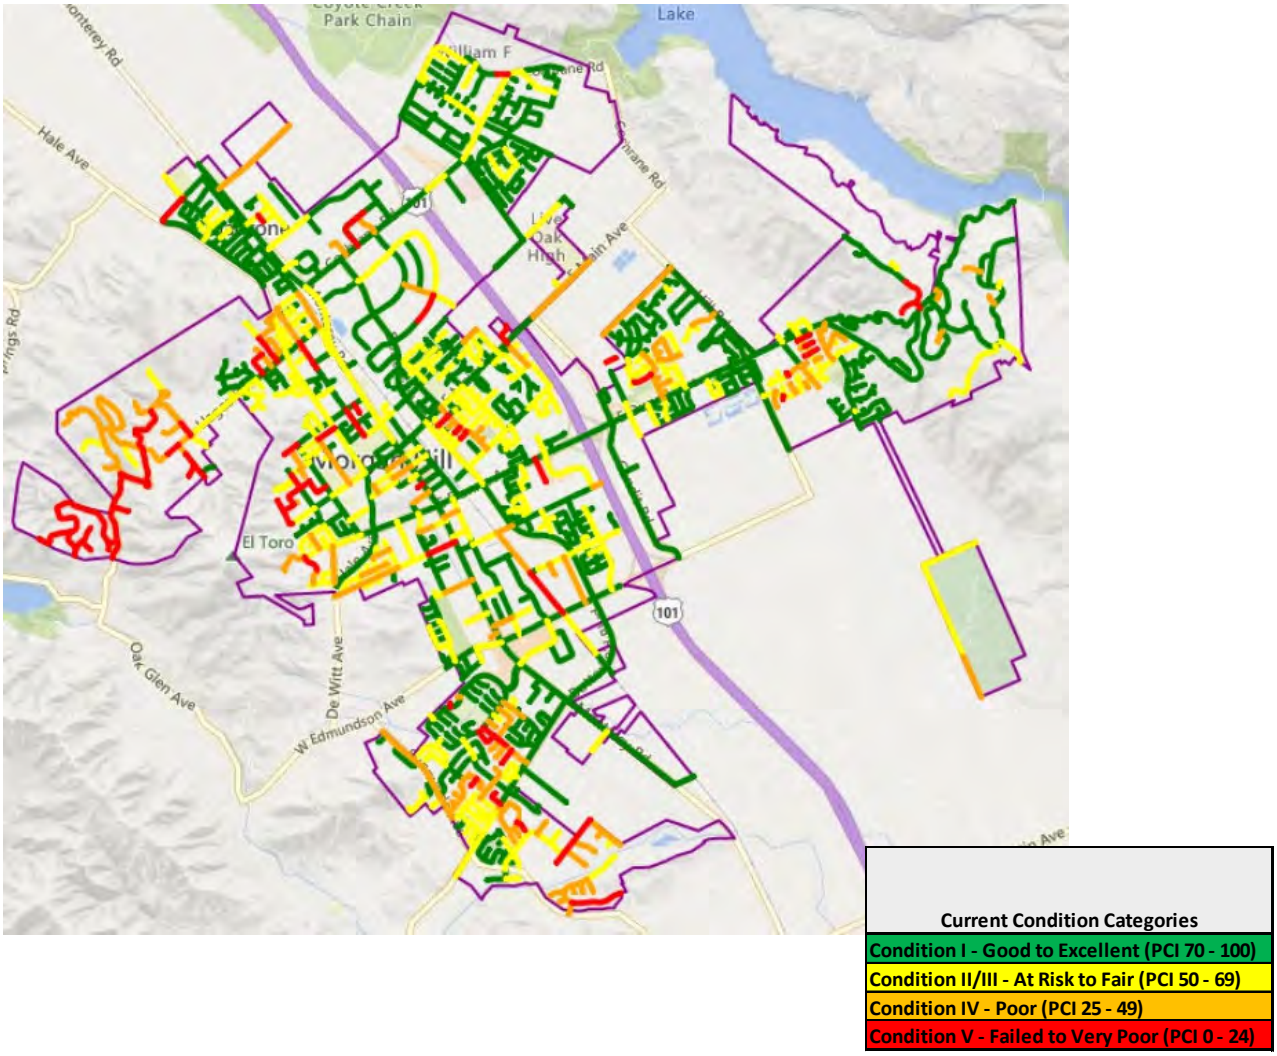
Approximately 55.2% (**Table 15)** of City streets will have a PCI equal to or greater than 70 PCI at the end of the year 2029 (Condition Category I).

Table 15. Scenario 5. No Funding - 2029 Condition Category Summary

	Scenario 5. No Funding	% Change at end of 5 years
% 'Good' in 5 years	55.2	-16.3
% 'Fair' in 5 years	28.6	11.2
% 'Poor' in 5 years	10.8	2.0
% 'Very Poor' in 5 years	5.4	3.1

Figure 16 is a projected PCI map of 2029 if the "No Funding" scenario is implemented.

Figure 16. Scenario 5. No Funding PCI Map - 2029 Condition Category Summary



CONCLUSIONS

The City of Morgan Hill currently has 141.07 centerline miles of paved roads or 309.08 lane miles. This asset comprises approximately 29.4 million square feet of pavement and is worth approximately $417 million to replace. After updating the City's pavement management system with inspections and recent maintenance and rehabilitation treatments, the City's overall network condition is 74 PCI. Approximately 72.2% of the City's road network has a PCI of 70 or better. The City's current backlog is about $32.4 million.

The first option the City should consider is implementing the "Unconstrained Funding Scenario." This scenario requires an average budget of $13.1 million annually or $65.5 million for five years. The effects of this budget increase the network PCI to 84 (**Figure 17**), while the backlog decreases to $0 (**Figure 18**) at the end of five years. 95.3% of City streets will have a PCI of 70 and above (**Table 16**).

The second option is implementing the "Plus 5 PCI Increase Scenario." Results show that the network increases to 79 by the end of five years (**Figure 17**). This budget would cost $7.9 million annually or $39.4 million over five years. The backlog decreases to $20.4 million (**Figure 18)**. This action will result in 86.6% of City streets with a PCI of 70 and above (**Table 16**).

The third option is using the "Constant PCI Scenario." This scenario averages out to $3.8 million per year or $19 million over five years. Results show that the network remains constant at 74 PCI (**Figure 17**). Backlog for this scenario decreases to $37.5 million (**Figure 18)**. 68.7% of City streets will have a PCI of 70 or better (**Table 16**).

The fourth option is implementing the "Current Budget Scenario." Results from this scenario show that the overall network PCI decreases to 73 at the end of five years (**Figure 17**), while the backlog increases to about $44.8 million (**Figure 18)**. This scenario would cost $3.5 million annually or $17.5 million for five years. Approximately 66% of the City's pavement will have a 70 or better (**Table 16**).

The fifth and least recommended action compared to the other options evaluated is the "No Funding scenario." This iteration does not use any funds for the maintenance or rehabilitation of pavements. Implementing this scenario will result in a PCI drop to 67 (**Figure 17**) and an increase in the backlog to $58.4 million (**Figure 18**). Approximately 55.2% of City streets will have a PCI of 70 and above (**Table 16**).

APPENDICES

SECTION I – PCI REPORT

SECTION II – NEEDS AND NETWORK SUMMARY STATISTICS

SECTION II – NETWORK CONDITION AND COST SUMMARY

SECTION IV – SECTIONS SELECTED FOR TREATMENT

SECTION V – OTHER BACKUP DOCUMENTS

SECTION I

- PCI REPORT[1] (sorted by Road Name)

SECTION PCI

The Section PCI contains a PCI reported sorted by Street Name (ascending)

ST ID – Street Identification

SEC ID – Street Section Identification

STREET NAME – Street Name

FROM – Start of the management section

TO – End of the management section

LENGTH – Length of management section

WIDTH – Width of management section

AREA – Area of management section

FUNCTIONAL CLASS – This is a group of streets or roadway subsystems that are classified pending on the level of service and traffic.

- A – Arterial
- C – Collector
- R – Residential/Local
- O – Other (user defined)

SURFACE TYPE – Type of pavement surface. A – Asphalt Concrete, O – Asphalt Concrete over Asphalt Concrete P-Portland Cement Concrete,

Current PCI – Pavement Condition Index of the management section – Last Calculated PCI

The Pavement Condition Index is a rating derived from the Pavement Management System (PMS). The rating is based from the visual distress inspection information that consists of the MTC inspection guidelines (Alligator Cracking, Block Cracking, Distortion, Longitudinal and Transverse Cracking, Rutting, and Weathering and Raveling) or any maintenance and rehabilitation information that was entered into the PMS.

REMAINING SERVICE LIFE - Useful life of pavement asset

Below are images of what streets look like in the condition category:

CONDITION CATEGORY RATING

Condition Category I (PCI 70 – 100, Pavement is classified in Very good to excellent condition and has little distress).

Condition Category II/III (PCI 51-69, Pavements are classified in the Good Category and have significant non-load and load related distresses).

Condition Category Good IV (PCI 26-50, Pavement are classified in the Poor Category and have major distress).

Condition Category V (PCI 0 – 25, Pavement is classified in the very poor to failed category and has extensive amounts of major distress)

SECTION II

- Preventative Maintenance and Rehabilitation Decision Tree
- Budget Needs – Projected PCI/Cost Summary
- Budget Needs – Preventative Maintenance Treatment/ Cost Summary
- Budget Needs – Rehabilitation Maintenance Treatment/ Cost Summary

PREVENTATIVE MAINTENANCE (PM) DECISION TREE

Preventative maintenance is the most cost-effective application to extend the life of streets and investment. Preventive Maintenance is designed to slow pavement deterioration.

This preventative maintenance report shows treatments and costs associated with preventative maintenance (Category I PCI Range = PM Treatment greater than/equal to 70 PCI). The PM decision tree is broken down by functional class and surface type. A management section with a PCI equal to/less than 70 is classified under the rehabilitation decision tree.

Below is a PM decision tree description:

Decision Tree Number/ID – This number is associated with the decision tree functional classification and surface type

Functional Classification – This is a group of streets or roadway subsystems that are classified pending on the level of service and traffic.

A – Arterial

C – Collector

R – Residential/Local

O – Other (user defined)

Surface Type – Is the type of surface specific for a management section. The classifications are:

AC – Asphalt Concrete

AC/AC – Asphalt Concrete over Asphalt Concrete

PCC – Portland Cement Concrete

AC/PCC – Asphalt Concrete over Portland Cement Concrete

Treatment Type and Descriptions – There are three categories for PM treatment (category I greater than equal to 70 PCI):

Cost per Square Yard – Unit cost assigned to each treatment with an exception of crack seal which is a linear foot unit.

Years Between Crack Seal – Defines the number of years between crack seal applications

Years Between Seal – Defines the number of years between surface seal applications

# of Surface Seals before Overlay – Sets the maximum number of surface seals that can be applied before a “restoration” treatment is recommended.

REHABILITATION MAINTENANCE DECISION TREE

This rehabilitation decision tree report shows treatments and costs associated with rehabilitation maintenance (Category II – V PCI range 0 to 69 PCI. The rehabilitation decision tree is broken down by functional class and surface type. A management section with a PCI equal to/greater than 70 is classified under the rehabilitation decision tree.

Below is a PM decision tree description:

Decision Tree Number/ID – This number is associated with the decision tree functional classification and surface type

Functional Classification – This is a group of streets or roadway subsystems that are classified pending on the level of service and traffic.

A – Arterial

C – Collector

R – Residential/Local

O – Other (user defined)

Surface Type – Is the type of surface specific for a management section. The classifications are:

AC – Asphalt Concrete

AC/AC – Asphalt Concrete over Asphalt Concrete

PCC – Portland Cement Concrete

AC/PCC – Asphalt Concrete over Portland Cement Concrete

Condition Category

Condition Category II (50-69 PCI)– Good, Non-Load Related – Light Rehabilitation

Condition Category III (50-69 PCI)– Good, Load Related – Light Rehabilitation

Condition Category IV (25-49 PCI) – Poor – Moderate Rehabilitation

Condition Category V (0-24 PCI) – Very Poor – Heavy Rehabilitation

Treatments – Treatment is assigned based on the management section PCI rating

Cost per Square Yard – Unit cost assigned to each treatment

BUDGET NEEDS – PROJECTED PCI/COST SUMMARY

The purpose for the budget needs report is to show your agency what it needs to do to fix the management sections that need to be fixed and the associated treatment costs with unlimited funds. The needs calculation is typically calculated over a 5-year period but can be adjusted by the user.

The budget needs project PCI/cost summary report shows what the PCI values would be over a five-ear period and how much the treatments would cost each year. In addition, the report would show what the network condition would be if no treatments were not applied. The costs are derived from the agency's preventative and rehabilitation maintenance trees.

Below is a description of the Budget Needs – Project PCI/Cost Summary report

Inflation Rate and Interest Rate – This value is user-defined and impacts the overall cost of the analysis period

Year – Analysis year

PCI Untreated – Overall network PCI when treatments are not applied

PCI Treated – Overall network PCI when treatments are applied

Cost – The cost per analysis period when treatment costs are applied

PM Cost – Preventative Maintenance (PM) Cost is the cost that is projected for preventative maintenance treatment over a 5-year period

% PM – Preventative Maintenance (PM) Percent is the percent value that is set aside for preventative maintenance

Total Cost – Total cost over a 5-year period

Needs - Projected PCI/Cost Summary

Interest: 2.00% Inflation: 3.00% Printed: 3/14/2025

Year	PCI Treated	PCI Untreated	PM Cost	Rehab Cost	Cost
2025	83	74	$8,260,172	$24,110,321	$32,370,493
2026	83	72	$1,362,981	$9,223,115	$10,586,096
2027	84	71	$1,528,686	$7,965,130	$9,493,816
2028	84	69	$1,017,406	$5,058,444	$6,075,850
2029	84	67	$2,349,081	$4,846,652	$7,195,733

	% PM	PM Total Cost	Rehab Total Cost	Total Cost
	22.09%	$14,518,326	$51,203,662	$65,721,988

BUDGET NEEDS – PREVENTATIVE MAINTENANCE TREATMENT / COST SUMMARY

This report shows the quantities and cost per year for preventative maintenance that is needed for the agency's road network.

Below is a description of the Budget Needs – Preventative Maintenance Treatment/Cost Summary:

Treatment – The preventative maintenance treatment applied. All treatments can be referred back to the jurisdiction's PM decision tree.

Year – The year the specific treatment is applied

Area Treated – The area treated is the projected quantity amount of the given treatment during the analysis year. Treatment unit costs are in sq.yd. with an exception of linear feet (seal cracks).

Cost – The cost is the projected cost that is associated with the specified treatment in the analysis period.

Needs - Preventive Maintenance Treatment/Cost Summary

Interest: 2.00% Inflation: 3.00% Printed: 3/14/2025

Treatment	Year	Area Treated		Cost
2 IN AC OVERLAY	2027	16,861.11	sq. yd.	$742,350

	2028	67,568.44	sq. yd.	$509,506
	2029	184,221.44	sq. yd.	$1,360,816
	Total	1,852,844		$12,271,733
	Total Quantity	1,940,395.1		$14,518,326

BUDGET NEEDS – REHABILITATION MAINTENANCE TREATMENT/COST SUMMARY

This report shows the quantities and cost per year for rehabilitation maintenance that is needed for the agency's road network.

Below is a description of the Budget Needs – rehabilitation maintenance treatment/cost summary:

Treatment – The rehabilitation maintenance treatment applied. All treatments can be referred back to the jurisdiction's rehabilitation decision tree.

Year – The year the specific treatment is applied

Area Treated – The area treated is the projected quantity amount of the given treatment during the analysis year. All treatment unit costs are in sq.yd.

Cost – The cost is the projected cost that is associated with the specified treatment in the analysis period.

Needs - Rehabilitation Treatment/Cost Summary

Interest: 2.00% Inflation: 3.00% Printed: 3/14/2025

Treatment	Year	Area Treated	Cost
MILL AND OVERLAY	2025	138,106.78 sq.yd.	$6,491,019

  Scenario 1 – Current Budget
  Scenario 2 – Constant PCI
  Scenario 3 – Plus 5 PCI Increase
  Scenario 4 – Unconstrained
  Scenario 5 – No Funding

BUDGET SCENARIOS – COST SUMMARY REPORT

This report summarizes the test scenarios given a specific budget or goal a jurisdiction has in mind. This report is designed to maximize a jurisdiction's funding cost-effectively.

Below is a description of the Cost Summary Report:

Year – Analysis year

PM Amt – Preventative Maintenance (PM) amount that is applied during the analysis year. This amount is subtracted from the given budget value

PM % - Preventative Maintenance (PM) % value that is applied during the analysis year. A percentage amount is subtracted from the overall budget and applied during each analysis year.

Budget – Dollar amount value that is used for calculation and analysis

Condition Category – This category shows the amount allocated to management sections with PCI values in the condition category II – V range for treatment

Project Rehab – This column show the amount set aside for special projects. The special projects rehab are rehabilitation projects that the user can override the PMS system for any given analysis year

Preventative Maintenance – The preventative maintenance column show the total dollar amount that is being applied to management sections during the analysis year

Project PM – This column show the amount set aside for special projects. The special projects PM are preventative maintenance projects that the user can override the PMS system for any given analysis year

Funded Stop Gap – This column shows the dollar amount allocated to management sections that need stop gap. Stop gap is often defined as localized distresses such as potholes, etc.

Deferred Maintenance – This column shows the dollar amount of how much the jurisdiction is deferring each analysis year. These management sections were earmarked for treatment bud were not funded

Surplus PM – This column shows the dollar amount not allocated after rehabilitation and PM funds were allocated

Unmet Stop gap – This column shows the dollar amount of stop gap that was not met and deferred

BUDGET SCENARIOS – NETWORK CONDITION SUMMARY REPORT

This report shows the impacts on the overall network PCI given a specific budget or goal an agency wants to meet. An overall network PCI is generated for each analysis year. In addition, this report also shows the percent breakdown of condition category before and after the test budget scenario. The breakdown is categorized by Functional Classification.

  Scenario 1 – Current Budget
  Scenario 2 – Constant PCI
  Scenario 3 – Plus 5 PCI Increase
  Scenario 4 – Unconstrained
  Scenario 5 – No Funding

BUDGET SCENARIOS – SECTIONS SELECTED FOR TREATMENT

The sections selected for treatment report shows in detail the management sections selected each analysis year for M&R treatment. This report helps the jurisdiction with identifying which streets are needed for M&R each analysis year.

Below is a description of the sections selected for treatment:

Year – Analysis year

Street Name – Name of Street

Beginning Location – Start of the management section

End Location – End of the management section

Section ID – Management section identifier

FC – This is a group of streets or roadway subsystems that are classified pending on the level of service and traffic.

- A – Arterial
- C – Collector
- R – Residential/Local
- O – Other (user defined)

Surface – Type of management section surface (AC, AC/AC, PCC, etc.)

PCI – Management section pavement condition index

Cost – Associated and projected cost applied to the management section

Cost Effectiveness Rating – The rating is the weight cost – effectiveness ratio of the recommended treatment. The system is programmed to determine and select sections identified as needing treatment using a ratio. The sections with the highest ratios are selected first until all available funds have been exhausted. The management sections requiring PM/Rehab but not selected for the initial year are reconsidered in the following years of the analysis period. These are deferred maintenance costs and are based on the unmet needed treatments deferred in the present year.

Treatment – Treatment contains the type of treatment the system is recommending for the management section
